
Introduction
Guide Overview

The Ninja Gaiden series has enjoyed a long and successful tenure during the last two console generations. Ninja Gaiden 3 marks the first time the series has graced the Xbox 360 and PlayStation 3 simultaneously.

It also introduces Clan Battle mode, the first competitive, multiplayer, online experience of the franchise. If you're new to the series, this guide will help you learn the basics of ninja combat and how to control Ryu Hayabusa as he faces a flurry of enemies.

If you're a seasoned Ninja Gaiden veteran, you should know that there have been a few changes since Ninja Gaiden II and Ninja Gaiden Sigma 2. This guide will bring you up to speed on what has changed, what is new, and teach you how to become a master ninja once again.

Guide Overview

The way of the Ninja

The Way of the Ninja covers the basic elements of Ninja Gaiden 3 and how to play as Ryu Hayabusa. Believe it or not, there are still people who have not played Ninja Gaiden before, and this section primarily helps those who are new to the series.

It covers all of the basics from attacking and defending to exploring the world of Ninja Gaiden 3.

Ninja Training

Ninja Training goes over all of the offensive and defensive techniques Hayabusa uses to make his way through the eight days (levels) featured in the game.

It offers insight into how and when to use each technique in combat and how to traverse the world of Ninja Gaiden 3 using new and old ninja tactics.

Ninja Enemies

Ninja Enemies details every enemy Hayabusa comes across in the main story mode and the Ninja Trials mode, excluding boss encounters. Each enemy is separated by class, with vital statistics that will help you learn which techniques to use to make quick work of them.

There's also useful information such as which days each enemy first appears and which enemies take priority over others. This section also covers Hayabusa's weapons and Ninpo magic.

Ninja Trials

Ninja Trials covers every mission in the Ninja Trial mode. This includes the type and number of enemies Hayabusa encounters, and the best strategies to progress through each mission. Everything you need to know to be prepared for each mission is included in this section.

Clan Battle

Clan Battle covers the online multiplayer aspects of Ninja Gaiden 3. All three multiplayer stages, as well as the best multiplayer strategies are included.

Path of the Ninja

Path of the Ninja provides a detailed walkthrough of all eight days in the main game. This includes the first appearance of each enemy, where you'll find save points, how to handle each mob of enemies and even boss strategies.

Boss Battles

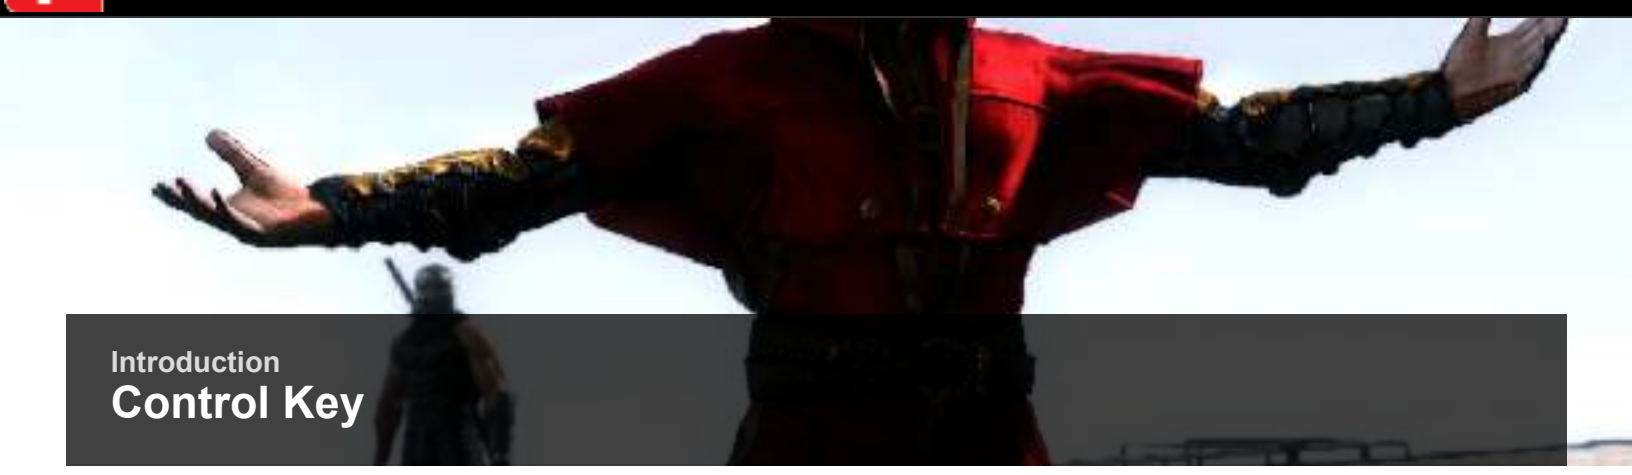
Boss Battles takes the boss battle strategies from The Path of the Ninja and puts them in a quick and easy reference chapter. If you're having trouble with a particular boss, instead of searching through the Path of the Ninja chapter, you can turn to this chapter and get right to the boss battle strategies.

Behind the Scenes

Behind the Scenes includes an exclusive interview with Team NINJA director, Yosuke Hayashi.

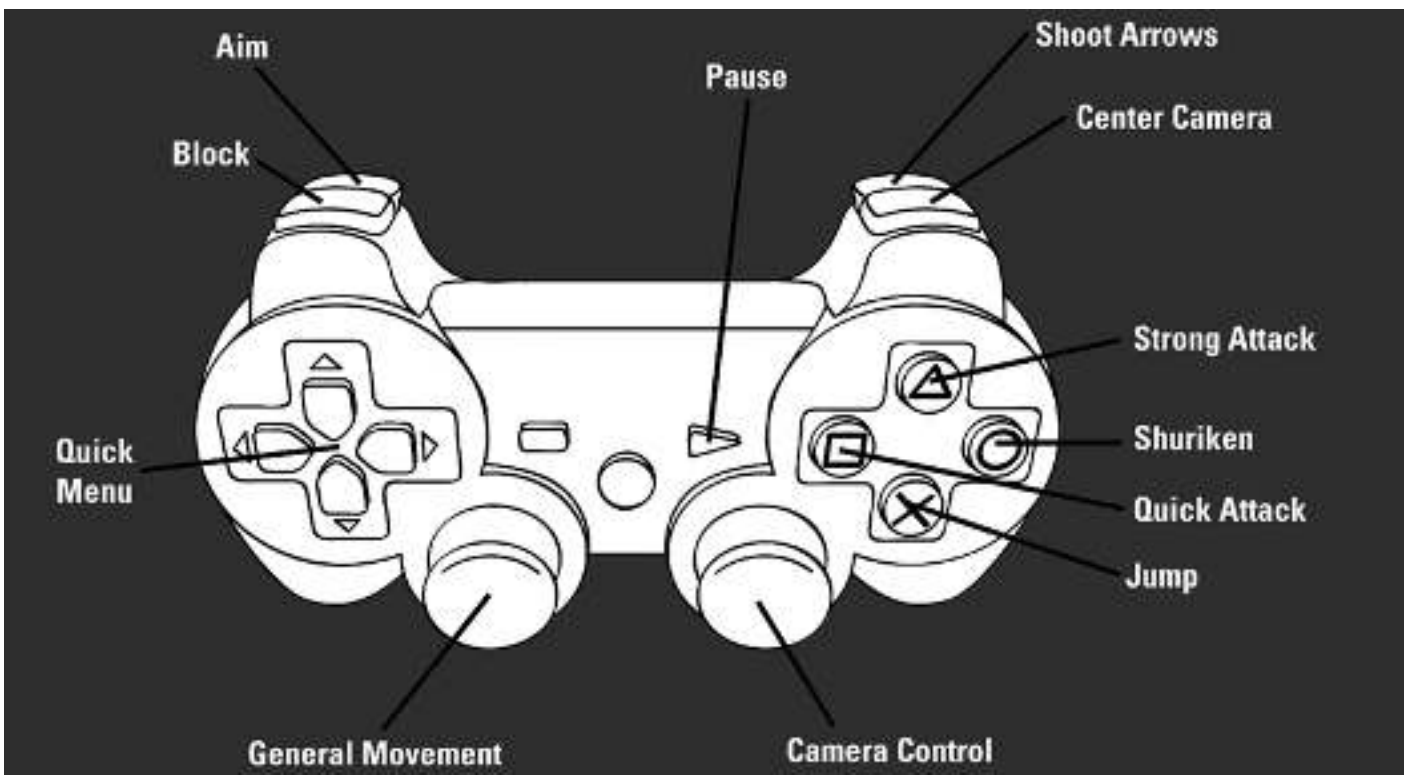
Achievements, Trophies and Unlockable Content

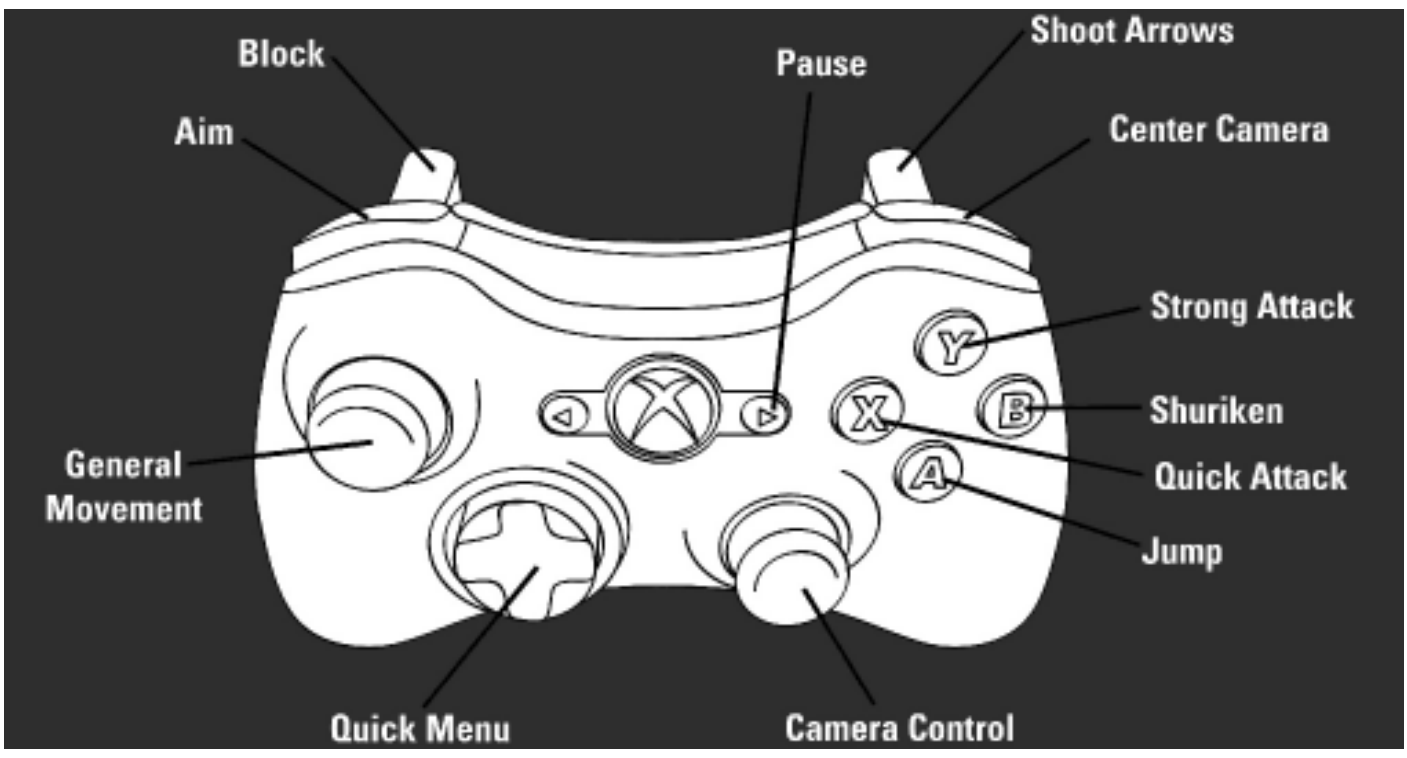
Achievements, Trophies, and Unlockable Content details all of the Xbox 360 achievements and PlayStation 3 trophies and how to earn them as you progress through the game.



Introduction
Control Key

There are multiple controller configurations available in Ninja Gaiden 3. Use whichever configuration feels best to you. However, for ease of use this guide refers to the default controller configuration (Type A).





Default Controller Configuration (Type A)

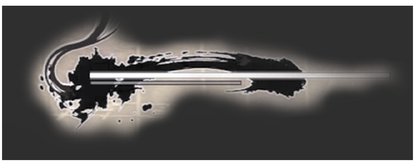
The Way of the Ninja
Game Basics

Everyone starts out as a beginner. Before you start slashing your way through Ninja Gaiden 3, there are a few basics to understand about Ryu Hayabusa and his various abilities.

This section covers everything you need to know to form a basis to learn the more advanced ninja techniques that are required to complete the game on harder difficulty settings.

It also covers the basics such as saving points and how Ninpo and Ultimate Techniques work.

Health Gauge



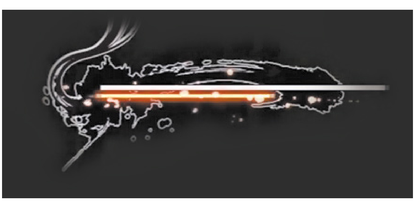
The Health Gauge indicates how much health Hayabusa has at the moment. As Hayabusa takes damage, the Health Gauge turns from white to gray. The gray portion of the Health Gauge does not have any specific meaning, other than to display the damage of the most recent attack. However, if enough damage is inflicted, the Health Gauge gets smaller.

Health Regain

Unlike previous Ninja Gaiden games, there are no health items to restore Hayabusa's health. The only way for Hayabusa to regain health is to save your progress, defeat all of the enemies in the immediate area, or use Ninpo (only in story mode).

At the end of each battle Hayabusa automatically regains lost health. The yellow bar under Hayabusa's Health Gauge is the Ki Gauge. In addition to controlling when Hayabusa can use Ninpo, the Ki Gauge determines how much Hayabusa's Health Gauge is extended after each battle. If the Ki Gauge is almost empty at the end of a battle, Hayabusa's Health Gauge will grow a small amount. If the Ki Gauge is full at the end of a battle, Hayabusa's Health Gauge may increases substantially (depending on the size of the Health Gauge at the end of the battle).

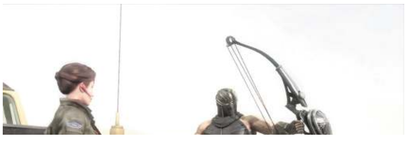
Ki Gauge

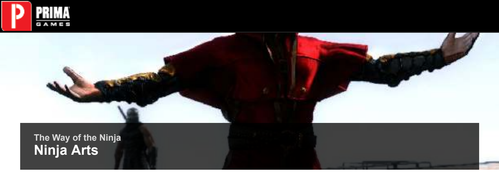


The Ki Gauge determines when Hayabusa can use Ninpo magic. Throughout the story mode, Hayabusa only has access to one Ninpo spell (Art of the Fire Dragon). In the Ninja Trials and Clan Battle modes, you cannot use the Ninpo available in story mode, but instead gain access to a different Ninpo spell (Dark Void).

The Ki Gauge fills up as damage is inflicted upon enemies. This includes the use of the Obliteration Technique when an enemy is near death. When the Ki Gauge is completely full, Ninpo can be used. Once Ninpo is used, the gauge returns to an empty state and must be filled again. The difficulty setting determines how quickly the Ki Gauge fills, with an easier setting allowing Ninpo to be used more often compared to harder difficulty settings.

Weaponry





Ninja Arts

Attacking

Quick attack

Strong attack

There are two different kinds of attacks in Ninja Gaiden 3; quick and strong. Quick attacks do not inflict significant damage, but execute quickly.

Strong attacks take longer to executed than quick attacks, but inflict more damage and can potentially stun an enemy, preventing them from attacking.

There are a variety of quick and strong attacks that change based on the type of weapon used and Hayabusa's positioning. It is also possible to attack with projectile weapons or Ninpo magic.

NOTE

For a complete list of weapons and attacks, refer to the Ninja Training chapter.

Defending

There are a few different ways to defend or avoid attacks. The easiest way is to block an attack, but while blocking, it is possible to dodge in any direction or counterattack, and you can slide under many projectile attacks or use the Wind Run as an evasion technique.

Some defensive techniques are better than others, depending on the situation. However, in most circumstances, blocking should be your first reaction as it will stop a vast majority of attacks from inflicting damage. Do not block or remain stationary for too long or else nearby enemies will use grabs that nullify Hayabusa's ability to block.

Combos

In Ninja Gaiden 3 you can chain together a series of strong and quick attacks to create a combo. Against most enemies, combo attacks cannot be interrupted if any of the attacks in the combo connect. However, some of the more powerful enemies can interrupt combo attacks with a counterattack, parry, or a strong attack of their own.

If another enemy that you are not actively attacking hits Hayabusa, it will also interrupt a combo. Strong and quick combos have similar properties to individual strong and quick attacks. Most strong attacks used in combos inflict a brief stun on most enemies and are much less likely to get counterattacked, parried, or blocked.

They also break many opponents' blocking stances, allowing Hayabusa to quickly attack while their defense is down. Quick attacks used in combos execute faster than strong attacks, but are more susceptible to counterattacks, parries, and blocking.

Ninpo Magic

Ninja Training

Weapons and Ninpo Magic

Pro Hayabusa has a variety of techniques and weapons that are available to him in Ninja Gaiden 4. He does not have an iron weapon as he does in previous games, but he compensates in many ways with upgraded tools for a variety of his gears.

Hayabusa's techniques fall into three categories: offensive, defensive, and environmental. Learn how and when to use these techniques, and learn all of the weapon combos to make battles easier and avoid taking damage.

Melee Weapons

Dragon Sword and Jinrai-Maru (Day 2)

Dragon Sword

Jinrai-Maru

The Dragon Sword and Jinrai-Maru (Hayabusa's Sword) are identical in every way (aside from appearance). Both swords inflict the same amount of damage and have the exact same combos.

It is not necessary to learn combos in Ninja Gaiden 2. As soon as the game starts, you can use any of the combos listed.

Dragon Sword and Jinrai-Maru Combos

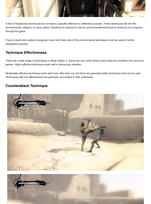
Yuna Fighting Techniques

Offensive Techniques

Many of the combination techniques are inspired by the fighting methods offered by Yuna. The essence for the techniques that pack little defensive ability and should be used almost exclusively while attacking enemies.

There are some offensive techniques that can be used for defensive purposes, but in general, an offensive technique is used in offset damage to an enemy.

Defensive Techniques



Throughout most of Final Gaiden 2, Nyaphesa is attacked by large numbers of enemies. Defensive techniques are used frequently in the fight. The use of defensive techniques enable Nyaphesa to survive an attack or, if not hurt by its enemies, to minimize damage.

Environmental Techniques

A few of Nyaphesa's environmental techniques are used to provide offensive or defensive purposes. These techniques take the form of environmental weapons. In many cases, Nyaphesa is required to use an environmental technique to continue your progress through the game.

If you're stuck and unable to progress, chances are that many of the environmental techniques must be used to further Nyaphesa's progress.

Technique Effectiveness

Every technique in Yuna's Fighting Style Revised 3, Some are new, while others have made the transition from previous versions of the game. Each technique has a specific purpose and level of effectiveness.

Absolutely effective techniques work well most often than not, but there are generally better techniques that can be used in certain situations. Some techniques are also generally very limited in their usefulness.

Counterattack Technique

Execution: Rapidly Press ⊡, ⊡, ⊡ during Attack, ⊡, ⊡ while blocking an enemy attack to counter it.

Type: Defensive

Effectiveness: Moderate

While not as effective as in previous games in the series, the Counterattack Technique is a good tool for lower troops. If the defensive technique is mistimed, Nyaphesa is vulnerable to attack from the enemy.

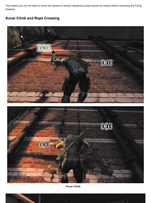
In previous Final Gaiden games the reward of successfully connecting with the technique far outweighed the risk of getting hit if was mistimed.

However, in Final Gaiden 2 the risk is much higher because a single enemy attack now has the potential to drain a significant amount of Nyaphesa's health.

The Counterattack Technique requires precise timing. If you attempt to use the technique too early, you will be vulnerable to attack. If you attempt to use the technique too late, you will be hit before it is executed.

Practice the technique during the early days of the game to perfect the timing. Play it on Hard and against a small number of enemies. Although perfect, the height of Nyaphesa's defensive ability. The Ninja Cat has a lot of getting accustomed to.

Escape



Execution: Rapidly Press ⊡, ⊡ and move the Left Analog Stick Right and Left.

Type: Defensive

Effectiveness: Low

Many of the activities Nyaphesa encounters throughout Ninja Gaiden 3 are gratifying techniques that cannot be blocked. However, in some instances, it is possible to escape the grab and minimize the damage inflicted.

Unfortunately, not all grabs can be escaped by the technique, especially grabs from stronger enemies.

Flying Bird Flip

Execution: Jump against a wall and press Jump, ⊡, ⊡ repeatedly to scale two opposing walls.

Type: Environmental

Effectiveness: High

The Flying Bird Technique has become a staple of the Ninja Gaiden series. Its safe success is in its hopeless reach higher ground and progress through an area. The technique is primarily used in narrow, vertical corridors.

In some cases, you can avoid fighting enemies by using the Flying Bird Technique to move them behind and continue Nyaphesa's progress unhindered.

Flying Beehive Technique

Execution: While jumping forward or during the Wall Run, press Strong Attack, ⊡, ⊡ to perform a beehive flight arrow.

Type: Offensive

Effectiveness: Moderate

The Flying Beehive Technique has become a staple of Ninja Gaiden series. Its safe success is in its hopeless reach higher ground and progress through an area. The technique is primarily used in narrow, vertical corridors.

In some cases, you can avoid fighting enemies by using the Flying Bird Technique to move them behind and continue Nyaphesa's progress unhindered.

Throw dagger

Execution: Hold ⊡, ⊡, ⊡ and release then Left Analog Stick Right and Left.

Type: Environmental

Effectiveness: High

When there is a long distance to cross, or a wall that must be climbed, Nyaphesa has the ability to use the Kunai to climb almost any surface, or use the rope dart to traverse it over.

Kunai Climb will work on trees, most rock formations, and other surfaces that are not smooth. Pressing and holding ⊡, ⊡ and pressing ⊡ will cause Nyaphesa to climb the surface. Pressing and holding ⊡, ⊡ and pressing ⊡ will cause Nyaphesa to launch the rope dart. Pressing and holding ⊡, ⊡ and pressing ⊡ will cause Nyaphesa to swing on the rope dart to the next area.

Kunai Climb

Rope Crossing

Throw dagger

Execution: Hold ⊡, ⊡, ⊡ and release then Left Analog Stick Right and Left.

Type: Environmental

Obliteration Technique

Execution: Rapidly Press ⊡, ⊡, ⊡ during Attack, ⊡, ⊡, ⊡ while blocking an enemy attack to counter it.

Type: Offensive

Effectiveness: Moderate

The Obliteration Technique is not as useful as it was in previous games, but it is easier to use that. It now offers an added bonus. It uses Ninjo Gaiden's gauge, the Obliteration Technique can be used to finish off an opponent to use that energy.

It saves time and opponent as after-effect damages when Nyaphesa lacks a large group of enemies. It Ninja Gaiden 2 it can only be used when an enemy has been defeated.

For example, after an enemy boss, most normally are essentially dead, but still crawl around on the ground for a few seconds. If Nyaphesa does nothing at this point, the enemy eventually dies.

Using the Ninja Gaiden Technique can be useful in this case. Instead of waiting for the enemy to die, Nyaphesa can finish the enemy off with the Obliteration Technique. This technique is also useful for finishing off enemies that are weakened by arrows.

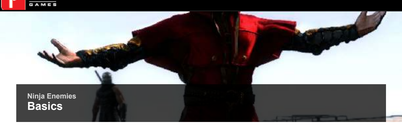
Nyaphesa is also equipped with the activation cannot be interrupted, which essentially makes Nyaphesa invincible for a short amount of time.

In Ninja Gaiden 3, Nyaphesa's Ki Charge points allow for two uses. The more attacks Nyaphesa consumes, the more damage is inflicted.

Obliteration Techniques are included in the Arrows, which means that finishing off as many enemies as possible with an Obliteration Technique gives Nyaphesa access to those that much faster.

Using these also replenishes Nyaphesa health, which makes Obliteration Techniques even more valuable.

Hide (Reverse Wind Technique)



Ninja Enemies
Basics

Hayabusa battles against an assortment of enemies throughout Ninja Gaiden 3. Most enemies have a variety of abilities and can be difficult to fight unless you understand how to avoid them or defend against them. This chapter covers each enemy and their abilities.

NOTE

This chapter only covers normal enemies. Bosses are covered in the Boss Battle Chapter.

Battle Strategies

While some enemy encounters require specific strategies, most of the time general strategies can be used to dispatch the enemies encountered throughout the game.

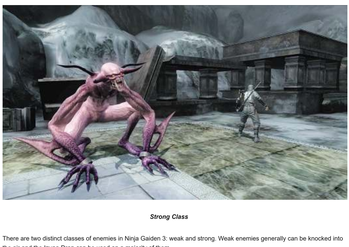
- When in doubt, use the Flying Swallow. This basic strategy works early in the game when enemies do not block frequently.
- Against groups of weaker enemies, use the Izuna Drop repeatedly. This keeps Hayabusa high in the air, away from many attacks. While not all enemies are susceptible to the Izuna Drop, those that are can be killed with a single Izuna Drop.
- Hayabusa is invincible during the Obliteration Technique. This is especially useful after an Izuna Drop. If Hayabusa is not close enough to an enemy to perform an Obliteration Technique, slide toward the enemy, then execute it. Hayabusa is invincible during the entire animation of an Obliteration Technique. In addition, at the end of the attack, it is possible to transition directly into an Izuna Drop or Ultimate Technique. The Izuna Drop locks on to nearby enemies, and if you hold Strong Attack toward the end of the Obliteration Technique animation, then release as it comes to an end, the Ultimate Technique cannot be stopped.
- During crowded battles, use Quick Attack combos to initiate a Steel on Bone technique. Following a successful Steel on Bone technique, Hayabusa's next attack results in another Steel on Bone technique. If the area is crowded enough, Hayabusa can take out several enemies with successive Steel on Bone techniques for an extended period of time.
- When Hayabusa is close to an enemy, do not remain in a blocking state. Most enemies have a grab or throw that cannot be blocked. The longer Hayabusa is blocking next to an enemy, the more likely it is that the enemy will use a grab or throw.

NOTE

Refer to the Path of the Ninja chapter for any battle-specific details of enemy encounters.

Class

Weak Class



Strong Class

There are two distinct classes of enemies in Ninja Gaiden 3: weak and strong. Weak enemies generally can be knocked into the air and the Izuna Drop can be used on a majority of them.

Strong enemies will often interrupt Hayabusa's attacks with an attack of their own and usually cannot be Izuna Dropped.

NOTE

The Izuna Drop and Arrow statistics determines if an Izuna Drop or arrows can be used on an enemy. If the Izuna Drop or Arrow stat is "yes," then they can be used. If it is "no," then they cannot be used.

Hit Points

Every enemy has a Health Gauge, just like Hayabusa. However, enemy Health Gauges are not visible, which makes it difficult to determine how many attacks it takes to defeat an enemy.

The hit points (HP) listed for each enemy are a numerical representation of the enemy's Health Gauge. Compare this number to the damage of Hayabusa's combos to determine how many attacks it takes to kill each enemy.

Range

Certain enemies can attack from a distance, while others can attack only when close to Hayabusa. Enemies with a long attack range can generally attack as soon as they see Hayabusa. Enemies with a short attack range can attack only when they are close to Hayabusa.

Priority

Almost every time Hayabusa is called into battle, he must fight multiple enemies at once. This is where the Priority rating is most useful. Focus on the enemy with the highest Priority rating, as that is the most dangerous enemy in the group and should be taken out first.

If multiple enemies have the same priority rating, defeat strong enemy types before weak enemy types, and any enemies with a projectile attack before enemies that do not have a projectile attack.

NOTE

Power, and priority are rated on a scale from 1 to 5 with 1 being the lowest and 5 being the highest.

Enemies

Trophy List

Enemy	First Seen	Class	Izuna Drop	Arrows	HP	Range	Power	Priority	Abilities/Weapons

Alchemists

Alchemist

Alchemist (White)

Alchemist Details

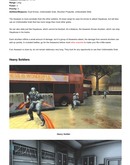
Pain Type: None
Health: 1000
Body Part: Any
Damage: 50
Accuracy: 80% - 100%
Attack Speed: 1.5 - 2.25
Range: 30 m
Weapon: Staff
Abilities/Weapons: Unbreakable Shell, Magic Bolt, Shield, Magic Bomber Fire, Ground Slam, Ground Damage, Angel Summoning

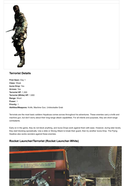
Alchemists are unique enemies that are found in Deep Below in Chapter 7. They are powerful units with lots of abilities to use and are found in the countryside as well as around the staff they use to teach and in combat by a lesser-trained alchemist.

In addition, they have the power to heal other fallen Alchemists, Soldiers and Grave Watchers.

They can also use an Unbreakable Shell that blocks Regenerate Health and Slowdown. If you have Elementals about, they can also use Elemental Shield to protect themselves from Elemental attacks. Alchemists can also use Magic Bolt, Magic Bomber Fire, Ground Slam, Ground Damage and Angel Summoning to attack you.

Alchemists are strong enough, even when Hopeless Bonds have taken the staff after a crucial amount of damage.





Alchemist (White)

Assassins

Assassin

Assassin (White)

Assassin Details

Shock Soldier HP: 1100
Accuracy: 80% - 100%
Attack Speed: 1.5 - 2.25
Range: 30 m
Weapon: Sword
Abilities/Weapons: Unbreakable Soldiers, Shockform Projectile, Shockform Slide, Shock Trooper

Shock Soldiers are unique enemies that are found in Deep Below in Chapter 7. They are powerful units with lots of abilities to use and are found in the countryside as well as around the staff they use to teach and in combat by a lesser-trained soldier.

They usually do not become mobile until they are close to Regenerate and tend to attack with an Unbreakable Shell.

They can also use an Unbreakable Shell that blocks Regenerate Health and Slowdown. If you have Elementals about, they can also use Elemental Shield to protect themselves from Elemental attacks. Shock Soldiers can also use Unbreakable Soldiers, Shockform Projectile, Shockform Slide and Shock Trooper to attack you.

Shock Soldiers are strong enough, even when Hopeless Bonds have taken the staff after a crucial amount of damage.

Damage: 100
Accuracy: 80% - 100%
Attack Speed: 1.5 - 2.25
Range: 30 m
Weapon: Gun
Abilities/Weapons: Gun, Grenade, Run, Unbreakable Shell

The terrorist are the most violent creatures that are found among the general run-of-the-mill enemies. They are found in the countryside as well as around the staff they use to teach and in combat by a lesser-trained terrorist.

They run at the player, but do not attack anything, but throw their grenades right against their skill users. Terrorists, once they reach the player, will throw their grenades right against their skill users. They can also use Unbreakable Shell to attack you.

War Dog (White)

Ninja Enemies
Black Spider Clan

Spider Aya Ninja

Spider Aya Ninja Details

First Seen: Day 5
Class: Weak
Izuna Drop: Yes
Arrows: Yes
Spider Aya Ninja HP: 1,500
Range: Long
Power: 3
Priority: 4
Abilities/Weapons: Flame Column, Projectile Attack, Teleport Attack, Unblockable Grab, Teleport

When Hayabusa encounters a Spider Aya Ninja, in most cases take them out before focusing on the other enemies in the area. Spider Aya Ninja have the ability to shoot flame-based projectiles from long range, and also create a vertical column of flame that appears directly under Hayabusa.

However, they only use these attacks when they are left alone, as both attacks take time to execute. When Spider Aya Ninja appear, take them out quickly with an Izuna Drop.

Even if they block the initial Izuna Drop, keep attacking until they stop blocking. Unlike the Talon Ninja, the Aya are far easier to hit with an Izuna Drop.

Spider Ninja/Archer

Spider Ninja

Archer

Spider Ninja Details

First Seen: Day 4
Class: Weak
Izuna Drop: Yes
Arrows: Yes
Spider Ninja HP: 1,500
Archer HP: 1,500
Range: Long
Power: 3
Priority: 4
Abilities/Weapons: Arrow Projectile Attack (Archers only), Bombs (Archers only), Unblockable Grab, Dual Katana

Spider Ninja and Archers, are very virtually identical. In fact, at close range, they fight exactly the same. However, it's at a distance where these enemies differ.

Normal Spider Ninja try to get close to Hayabusa to attack with their swords, while Archers stay back and attack with arrows. Both are very susceptible to Izuna Drops and go down with ease.

In general, take out any Archers first when you encounter a group of enemies. Once they come within visual range of Hayabusa, they begin to shoot flaming arrows. They do not cease firing until Hayabusa closes in on them.

Archers and normal Spider Ninja also have a bomb attack just like the Spider Talon Ninja.

However, they use it far less frequently. In a large group of Spider Ninja, Archers and Spider Talon Ninja, the Archers take priority, but only if the arrows are making it difficult to attack. If this is not the case, consider Archers and normal Spider Ninja the same priority.

Spider Talon Ninja

The Spider Talon Ninja is almost identical to the Melee Ninja from previous Ninja Gaiden games. He attacks with a talon weapon similar to the old Dragon's Claw. He does not have any notable abilities aside from a few basic combos and an Unblockable Grab.

Unfortunately, the Spider Talon Ninja blocks more frequently than most of the other enemies in the game. Use a slide to stop him from blocking, then quickly transition into an Izuna Drop. If the Talon Ninja evades the Izuna Drop (which happens often), use a series of Quick Attacks.

However, watch out for his bombs, which he usually drops after evading an attack. If you see a bomb, quickly slide away to avoid the blast.

It is also possible to break their defenses with a series of Strong Attacks, but Spider Talon Ninja are agile and it may be difficult to catch them. In this instance, use a single Strong Attack to stun the Ninja, then follow with Quick Attack combos.

If at all possible, save Ultimate Techniques and Ninpo to use against these enemies. They are the hardest of the Black Spider Clan to defeat.

Spider Talon Ninja Details

First Seen: Day 4
Class: Weak
Izuna Drop: Yes
Arrows: Yes
Spider Talon Ninja HP: 2,500
Range: Short
Power: 2
Priority: 3
Abilities/Weapons: Unblockable Grab, Bombs

Pyrewolves Faced

Pyrewolves Faced Details

Final Stars: Tier 1
Initial Stars: Tier 1
Ascends: No
Pyrewolves Faced: 1,000
Rounds: 1
Power: 1
Archetypes/Keywords: Unbreakable Grab, Grounds Explosion, Size Matter

Pyrewolves Faced are identical in overall stats to Pyrelords, except they differ in how dangerous they are. They're much more aggressive. A group of Pyrewolves Faced can be difficult to contend with if Hyperjuice is not on-hand to make the environment safer.

Due to the more violent attitudes of Pyrewolves Faced, they're a Favorite Monster for Pyre Fighters who like to Grab Monsters. Grab, and then Grab Size, then Grab them off! An Unbreakable Technique and the absence of problematic Ascendants and Pyrelords makes Pyrewolves Faced a very safe Monster to Grab and Throw around.

High Von Earl Faced

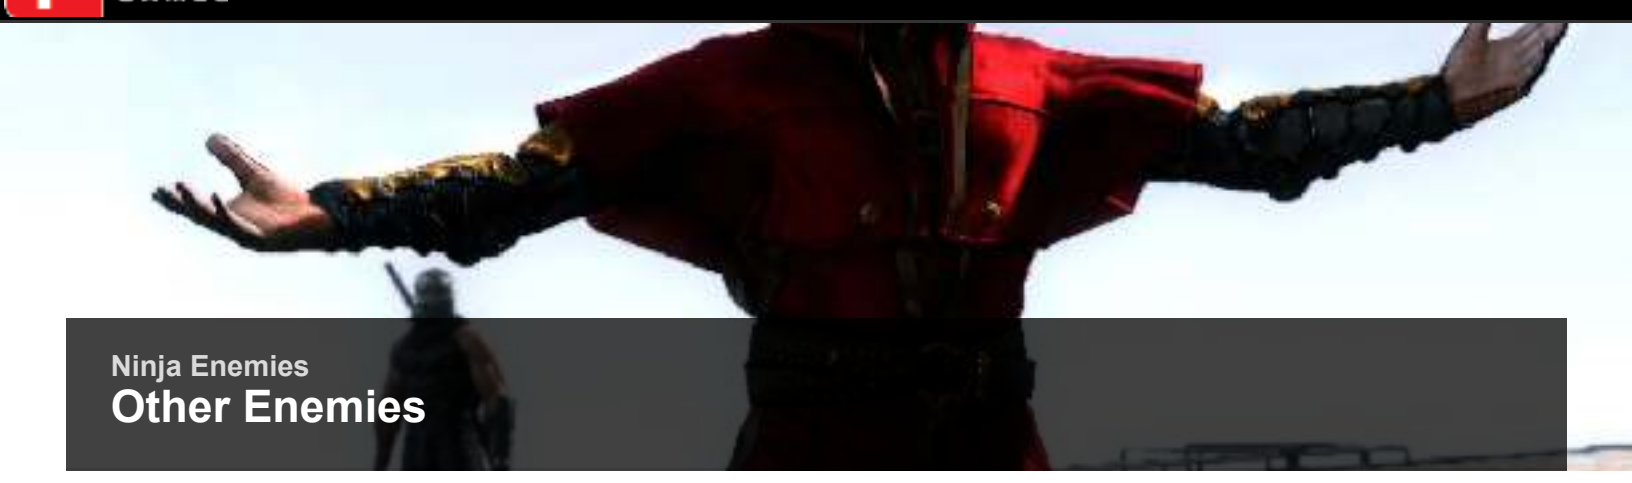
High Von Earl Faced Details

Final Stars: Tier 1 Locked ?
Initial Stars: Tier 1
Ascends: No

Rounds: 1
Pyrewolves Faced HP: 1,000
Power: 1
Archetypes/Keywords: Unbreakable Grab, Grounds Explosion, Pyre Projectile

High Von Earl Faced are the ultimate Enemies the Earl Faced Family has to offer. They weren't a Pyrelord, but they're close. Jokes how the Von Earl Faced Pyrelord is used fairly by the Pyre, can be the Earl Faced Family. Von Earl Faced are Pyrelords who have been Pyre Projected into the Pyre Arena. Von Earl Faced are Pyrelords who have been Pyre Projected into the Pyre Arena. Von Earl Faced are Pyrelords who have been Pyre Projected into the Pyre Arena. Von Earl Faced are Pyrelords who have been Pyre Projected into the Pyre Arena.

As for Jorgle, the Earl Faced Pyrelord who is jumping from planet Earth Unbreakable, and like the normal Earl Faced Pyrelords, he's Unbreakable. Jorgle is also Unbreakable. Jorgle is also Unbreakable. Jorgle is also



Other Enemies

Anti-Aircraft Gun Stand CIWS

Anti-Aircraft Gun Stand CIWS Details

First Seen: Day 7
Class: Strong
Izuna Drop: No
Arrows: No
Machine Gun Stand HP: 1,000
Range: Long
Power: 2
Priority: 1
Abilities/Weapons: Machine Gun

The Anti-Aircraft Gun Stand CIWS is similar to the Machine Gun Stand, but it does not fire missiles at Hayabusa, and an Izuna Drop cannot damage it. However, it is very weak and can easily be destroyed with a few Quick Attacks.

Because its only weapon targeted at Hayabusa is a machine gun, it does not inflict much damage to him and therefore does not have a high priority. In most cases, it will be the last enemy you destroy.

Light Shell Bug

Light Shell Bug Details

First Seen: Day 3
Class: Weak
Izuna Drop: No
Arrows: Yes
Light Shell Bug HP: 100
Range: Short
Power: 1
Priority: 2
Abilities/Weapons: Unblockable Grab, Lunge Attack

The Light Shell Bug is small and always attacks in groups. It is the only enemy that Hayabusa can kill with his slide. The best way to take out a Light Shell Bug is to either slide into it twice, or slide once to knock it into the air, then cut it down with a Quick Attack combo.

Remember that Light Shell Bugs also spawn from a nest. Ignore the Light Shell Bugs if you can, find the nest and destroy it, and then take care of any remaining Light Shell Bugs.

Machine Gun Stand

Machine Gun Stand Details

First Seen: Day 3
Class: Strong
Izuna Drop: No
Arrows: No
Anti-Aircraft Gun Stand CIWS HP: 1,000
Range: Long
Power: 3
Priority: 4
Abilities/Weapons: Machine Gun, Rocket Launcher

The Machine Gun Stand is a stationary artillery unit that fires missiles and has a machine gun. Because it fires missiles, it has a relatively high priority and should generally be taken out before most other enemies.

It is not possible to use an Izuna Drop on the Machine Gun Stand directly, but if Hayabusa is fighting an enemy near a Machine Gun Stand, the last attack of the Izuna Drop inflicts damage to nearby enemies, including the Machine Gun Stand.

Ultimate Ninja	Downloadable Content (DLC)

Ninja Trials and Clan Battle Unlockables

How to unlock Kanji and the Team Ninja Logo

There are a total of 2,136 kanji available in the game. Obtaining all kanji unlocks the Team Ninja logo. The game automatically unlocks ten kanji at random when it's first powered up. Additional kanji are unlocked randomly as you clear Ninja Trials and play Clan Battles, and if you perform a Ghost Kill in Clan Battle against an opponent who is wearing a kanji you do not have. However, some kanji can only be unlocked through Ghost Kills and are not accessible any other way.

Unlockable Trials

Trials	How to Unlock
Ninja Trials Mode	Complete Day 2 in story mode on any difficulty.
Acolyte Trials (1–10)	Complete Day 2 in story mode on any difficulty.
Mentor Trials (1–10)	Get a total of 200,000 Karma in Ninja Trials mode.
Leader Trials (1–5)	Get a total of 500,000 Karma in Ninja Trials mode.
Master Trials (1–5)	Get a total of 1,000,000 Karma in Ninja Trials mode.
Ultimate Trials (1–3)	Get a total of 2,000,000 Karma in Ninja Trials mode.

NOTE

Ghost Kill, Falcon Dive, and Harakiri are only used in Clan Battle mode and cannot be used in Ninja Trials mode.

Unlockable Skills

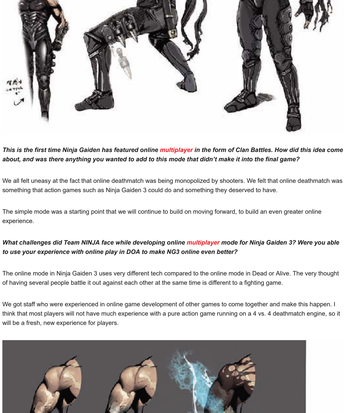
Behind the Scenes

Interview with Yosuke Hayashi

We were fortunate enough to ask some production questions and even a DOA5 question of Team NINJA director, Yosuke Hayashi.



This is the first time Ninja Gaiden has featured online multiplayer in the form of Clan Battles. How did this idea come about, and was there anything you wanted to add to this mode that didn't make it into the final game?

We all felt uneasy at the fact that online deathmatch was being monopolized by shooters. We felt that online deathmatch was something that action games such as Ninja Gaiden 3 could do and something they deserved to have.

The simple mode was a starting point that we will continue to build on moving forward, to build an even greater online experience.

What challenges did Team NINJA face while developing online multiplayer mode for Ninja Gaiden 3? Were you able to use your experience with online play in DOA to make NG3 online even better?

The online mode in Ninja Gaiden 3 uses very different tech compared to the online mode in Dead or Alive. The very thought of having several people battle it out against each other at the same time is different to a fighting game.

We got staff who were experienced in online game development of other games to come together and make this happen. I think that most players will not have much experience with a pure action game running on a 4 vs. 4 deathmatch engine, so it will be a fresh, new experience for players.

Ninja Gaiden 3 features multiple instances in which the player controls Hayabusa as he walks (and sometimes crawls) toward an enemy. In other games, these instances would be part of a cinematic. What made you decide to give the player control in these situations?

We really wanted to make sure players felt connected to Hayabusa and to feel what he is feeling at that moment. We believe that the game experience would be very different if players had no control over the character in these instances.

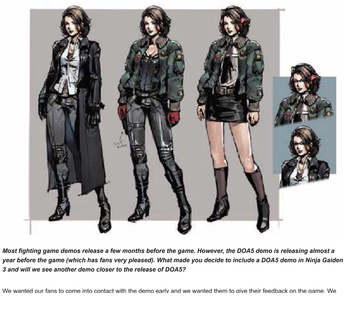
Previous Ninja Gaiden games featured a variety of weapons and Ninpo, and the ability to upgrade weapons. However, this is not a focus of Ninja Gaiden 3. How did this change come about?

We felt that it was important to change the way the game flows in order to show the substance of the story and Hayabusa also needed to wield the katana in order to establish this. However, we do realize that fans want other weapons as well, so we are doing something about this.

Difficulty has always been a strong selling point for the Ninja Gaiden series. It seems that what creates this challenge has changed somewhat in Ninja Gaiden 3, compared to previous games in the series. Can you talk about how you approached the difficulty of the game during development?

In a game series such as this one, the players' skill level range gets wider and wider for each iteration of the game. Players who have been playing since the first Ninja Gaiden will be much more skilled than players coming into the series right now.

It is for this reason that we want to make Ninja Gaiden 3 have broader appeal to more action gamers. And at the same time, we want to give our hardcore fans what they desire. And to also create different entry points for players with different skill sets.



In the past, the easiest difficulty mode was called "Ninja Dog." However, in Ninja Gaiden 3 it is now called "Hero." What caused this change?

In the Hero play style, enemies will not take it easy on you. In the past in Ninja Dog, enemies were less aggressive. In Hero, enemies come hard at you and you can take them down like a "hero," hence the name of this play style.

Ninja Gaiden and Dead or Alive have always had some crossover. Ayane makes an appearance in NG3, as well as Hayate's sword. Will we see more of this cross over in the future—perhaps with DOA characters getting more involved in the Ninja Gaiden games, or someone like Joe Hayabusa in the DOA games?

We want to expand the Team NINJA lineup with a broader vision in mind. Stay tuned to Team NINJA guys!

Most fighting game demos release a few months before the game. However, the DOA5 demo is releasing almost a year before the game (which has fans very pleased). What made you decide to include a DOA5 demo in Ninja Gaiden 3 and will we see another demo closer to the release of DOA5?

We wanted our fans to come into contact with the demo early and we wanted them to give their feedback on the game. We

Ninja Trials

Mission Briefing

Difficulty Levels

●	Fair
● ●	Challenging
● ● ●	Hard
● ● ● ●	Very hard
● ● ● ● ●	Insanely Difficult

There are 5 missions in Ninja Trials to conquer! Let's try them out. Access Lowa's Mentor Uchimoto, Leader Eiko, Master Ninja (you hero), and Ultimate Ninja (mysterious hero).

Each mission has a randomized mixed enemy of enemies. Unlike most encounters, your Health Gauge is replenished after each event of enemies. However, there are bosses scattered throughout the missions.

Each mission has a Rating. Rating is based on your Time, how much damage you've taken, and how many of the missions is by yourself, or online with a friend.

The Acrobatic and Mentor missions can be difficult at times, but a skilled ninja can make his way through them with enough practice.

The Leader, Master Ninja, and Ultimate Ninja missions are extremely difficult to complete without the aid of a partner. It's still technically possible to complete the missions alone, but it is a daunting and very difficult task.

Ninja Trials is the only way to unlock the Ultimate Ninja Costume. If you want to be a shadow ninja, you start at the same place, but your same bonus is reduced.

Where all of your enemies are used, you can retry the missions, but you must start at the first wave again.

Mission Ratings

Difficulty	Ratings
Acrobat	5
Mentor	5
Leader	7
Master Ninja	7
Ultimate Ninja	9

Karma Points

Rewards in your karma score are earned by clearing missions, getting Fatal Counters, killing with a bonus (big performance), an Obliteration Technique, and other various conditions.

At the end of each mission a total karma score is calculated, which goes toward your player level and technique level.

To help maximize your karma score, use Obliteration Techniques and Ultimate Techniques as much as possible.

A high combo count is impressive, but combos provide the least amount of karma points, making them the least important aspect of increasing your player and technique levels.

Mission Clear Karma Bonus

Mission	0 Karma	1 Karma	2 Karma	3 Karma	4 Karma	5 Karma
Acrobat 1-2	12,000	8,000	4,000	2,000	1,000	0
Acrobat 13	15,000	10,000	8,000	7,000	6,000	5,000
Mentor 1-2	15,000	10,000	5,000	3,000	—	—
Mentor 13	20,000	15,000	12,000	10,000	—	—

Ninpo Master	Kill the highest level enemy	Can Battle/Ninja Trials
Kill Them All	Kill each enemy at least one time, or kill at least two enemies at the same time	Can Battle
Kill Streak	Kill the enemy in the just-blow your	Can Battle/Ninja Trials
Obsession	Successfully kill the same enemy	Can Battle
First Blood	Be the first enemy	Can Battle
Steel Fiend	Kill the toughest enemy with a Steel Kill to acquire his key!	Can Battle

Shadow Contracts

Shadow Contract	Requirement	Mode
The Strongest Blade	Become the top ninja and end your others to victory!	Can Battle
A Leader's Responsibility	Complete The Strongest Blade, then protect this designated leader.	Can Battle
The Strongest Clone	Complete The Strongest Blade, then kill the strongest leader.	Can Battle
My Honor Above All	Betray your allies.	Can Battle
The Plan Revived	Complete No Honor Among Ninja Then protect your new ally.	Can Battle
Ninja Betrayal	Complete No Honor Among Ninja, then kill the leader.	Can Battle
Mutual Destruction	You and the ally must drop most of them to half HP. Tire to the center, and you must drop most of them to half HP.	Can Battle

Rescuing

Rescuing comes with a partner. If either player dies, the other can rescue him by getting close to his body and pressing .

This is the most exponentially 2D elements to rescue your partner, with a 10 second countdown appearing on the screen as a warning. If you fail to rescue your partner, or both ninja die at the same time, the mission ends in failure.

Rescuing your partner, if you can difficult to find your partner, the Guide tool.

There's no limit to the number of times you or your partner can be rescued. However, each time a rescue attempt is made, the Health Gauge is reduced by a small amount. Eventually, the rescue attempt will fail if you're not careful.

Enemy Priority

The best way to complete most of the missions is to properly prioritize the enemy targets. The enemy priority in Ninja Trials is based on how vulnerable and how the enemy posts during the main game.

Keep an eye out for higher priority enemies, but use the lesser priority foes to build up your Ninpo and Ultimate Technique. Read Technique for the fighting system to know how easier to take down.

NOTE

All bosses should be considered the highest priority.

Enemy Priority

Enemy	Priority
Armormet	1
Assassin/Assassin (White)	1
Heavy Soldier/Heavy Soldier (Shield)	1
Heavy Soldier (Jetpack)/Heavy Soldier (Jetpack White)	1
High Vain Gulf Fiend	1
Cultivar Fiend	2
Ninpha Fiend	2
Ninpha Pernonia Fiend	2
Shadow Fiend	2
Vain Gulf Fiend	2
Ghost Soldier	2
Homunculus	2
Heavy Soldier (Jetpack)	2
Light Shell Bug	3
Machine Gun Stand	3
Megadestruction Bazooka	3
Terrorist/Terrorist (White)	3
Cautoma	3
Terrorist (Rocket Launcher)	3
Swordmaster	3
Spider Ayo Ninja	3
Spider Ninpo/Ninpo	3
Spider Talon Ninja	3
War Dog	3

NOTE

Enemy priority is rated on a scale of 1 to 5, with 1 being the lowest priority and 5 being the highest.

Boss Encounters

Boss encounters are very much all against one or more boss characters. These bosses fight almost exactly the same as they did when you encountered them during the main game.

However, in Ninja Trials mode you may fight against multiple bosses at once or more may be other enemies fighting alongside the boss.

Unless otherwise noted, follow the strategies in the Boss Battles chapter to make it through each boss encounter.

Acolyte Mission Analysis

Acolyte I1

DIFFICULTY:

Mission Details

Wave	Enemy	Initial Force	Reinforcements
1	Nomad	4	0
2	Rocket Launcher	2	0
3	Nomad	3	0
4	Rocket Launcher	2	0
5	Heavy Soldier	2	0
6	Assassin	2	0
7	Heavy Soldier (Dread)	2	0

Tactical Analysis

Wave 1: Dodge toward the Rocket Launcher enemies to take them out first. Next focus on the remaining Skirmishes. The Rocket Launchers will be your biggest threat, so keep your distance from them.

Wave 2: Use your Cannon and Shield Generator Augmentations to help you in this fight. Stick to the Cannon to quickly take out the Heavy Soldier and Assassin.

Wave 3: Upgrade the Heavy Soldiers and focus on the Skirmishes (Rocket Launcher) again. Slide toward them to avoid the missiles, then use Burst and Cannon.

Wave 4: Three Rocket Launcher enemies just dead-ended with you! Focus fire them. Watch for the remaining Skirmishes.

Wave 5: Slide toward the Shield Soldiers to avoid attacks from the Assassins. Use a Strong Attack to knock away their Shield Generator, then Burst and Cannon to take out the Assassins.

Once the enemies are gone, the Heavy Soldiers won't be able to stop your attacks for long, so interrupt your momentum with Dodge.

Acolyte I2

DIFFICULTY:

Mission Details

Wave	Enemy	Initial Force	Reinforcements
1	Rifle Thug	3	0
2	Assassin	2	0
3	Rocket Launcher	2	0
4	Shield Soldier	2	0
5	Rifle Thug	4	0
6	Assassin	2	0
7	Heavy Soldier	2	0

Tactical Analysis

Wave 1: The Rifle Thugs are no difficult to contend with in this mission, but the priority still goes to the Tarnished (Rocket Launcher) that can hurt you from the back. Focus on the Rifle Thugs.

However, if you Tarnished, just to the way while you're attacking the Rifle Thugs, finish them off before shifting your focus to the Rocket Launcher.

Wave 2: Use arrows to evade the Shield Soldiers, then strike toward them and attack with an Ironic Drop, if you have it.

If you're not close enough to dodge an Ironic Drop, you can also use Burst to close the gap and then attack with a Ironic Drop.

If you're not close enough to attack before the Assassin's attack, you can also use Burst to close the gap and then attack with an Ironic Drop.

Wave 3: Ignore the soldiers and focus exclusively on the Rifle Thugs until all have been taken out. With the Rifle Thugs out of the way, attack the Shield Soldier, but keep an eye on the Assassins.

If their shoulder are too much to handle, drift your focus to their defense-ring on the Assassins or other side of the area.

Mission Details

Wave	Enemy	Initial Force	Reinforcements
1	Assassin Soldier	2	0
2	Nomad	5	0
3	Rocket Launcher	2	0
4	Nomad	4	0
5	Rocket Launcher	2	0
6	Assassin	2	0

Tactical Analysis

Wave 1: The Assassin Soldiers will likely ready to deal with. Use one or two arrows, then slide to avoid any potential counter-attacking over and to Summoner Soldiers during their turn.

Request the proven skill of the Summoner Soldiers are down.

Wave 2: Use your Cannon and Shield Generator Augmentations to the Nomads on either side of the area.

Drift toward the Summoner to create some distance between your character and the Tarnished, then use arrows to take down the Summoner Soldiers.

Head to the opposite side to request the proven skill after the Tarnished (Rocket Launcher), then focus on the Tarnished on the ground.

Wave 3: This is very similar to the last wave, with the addition of Skirmishers. Slide toward the towers to create some breathing room for the Skirmishers, then Burst and Cannon to take them out.

If the Assassins are too close, strike between arrows to stay safe. Repeat this strategy on the opposite side, then take out the Assassins with the help of your Cannon.

With the highest ground-enemies taken care of, there isn't a need to prioritize the remaining enemies.

Acolyte I4

DIFFICULTY:

Mission Details

Wave	Enemy	Initial Force	Reinforcements
1	Spider Ninja	2	0
2	Acrobat	2	0
3	Spider Ninja	2	0
4	Spider Ninja	2	0
5	Spider Ninja	2	0
6	Spider Ninja	2	0

Tactical Analysis

Wave 1: The Acrobats are the most focus at the beginning of this mission. Take them down, then handle the rest of the Ninja.

Wave 2: The Spider Ninja can be frustrating with your limited attack power. Stay in close with Quick Attack combos and be prepared to strike away if you see a Ninja preparing for the Ninja Vanish.

Wave 3: Focus on the Spider Ninja Assassins first, then the Ninja Scouts. Then press the Support Ninja off alone. Once they're down over, it's dispatch the Spider Ninja, leaving the Spider Ninja Ninja for last.

Use your Cannon to help you take out the Ninja Assassins, then Burst to close the gap and use Dashes.

Acolyte I5

DIFFICULTY:

Mission Details

Wave	Enemy	Initial Force	Reinforcements
1	Heavy Soldier	2	0
2	Shadow Fiend	5	0
3	Iron Golf Hound	2	0
4	Demon Bayonnet	2	0
5	Heavy Soldier	2	0
6	Magma Pevonia Fiend	2	0

Tactical Analysis

Wave 1: The reason starts with the first Initial Colossi Fiends. Remember, they like to break many of your attacks to Magma Pevonia Fiend. If you're attacking a Pevonia Fiend, you're likely to be interrupted by the Colossi Fiend.

Use it on the Colossus Fiends until no more remain. Keep an eye on the dead Colossi Fiends in order to avoid their suicide attacks.

If this isn't complete, attempt Demonic Bayonnet to finish yourself off. Use Burst to close the distance and Dashes to avoid attacks.

When only the Magma Pevonia Fiend is left, use it to finish the cycle, then slide under the attack and use Strong Attacks to inflict heavy damage.

Unfortunately, you don't have a Strong Attack combo in your kit, so you'll need to use your Cannon and Strong Attacks.

Wave 2: Use your Cannon and Shield Generator Augmentations to the Shadow Fiends. Then, use Burst to close the gap and use Dashes to avoid attacks. Use Strong Attacks to finish off the Shadow Fiends.

Wave 3: The best strategy in this wave is determined by your enemy's preference. Under most circumstances, it's best to use Dashes to avoid attacks. Use Strong Attacks to finish off the Iron Golf Hounds.

This allows you to build up an Ultimate Technique to save for the Iron Golf Hounds. However, if you have difficulty executing the Iron Golf Hounds, take down the Demon Bayonnet first, then use Strong Attacks to finish off the Iron Golf Hounds.

Wave 4: The worst thing will be the Demon Bayonnets and Colossi Fiends. When a total of two enemies remain, the Magma Pevonia Fiend will become Enraged.

Stay away from the Demon Bayonnet and use the Colossi Fiends to build up to an Ultimate Technique to use on the Demon Bayonnet.

When the Magma Pevonia Fiend appears, let it stay in the air until all the other enemies are dead. Keep the Magma Pevonia Fiend in the air with Strong Attacks, then finish it off with Strong Attacks.

Slide out of the way to avoid the attack, then continue assaulting the other enemies.

When only the Magma Pevonia Fiend remains, attack it with enemies when its eyes light up to bring out the Magma Pevonia Fiend, then follow the strategy from the first wave to finish it off.

Acolyte I6

DIFFICULTY:

Mission Details

Wave	Enemy	Initial Force	Reinforcements
1	Colossi Fiend	4	0
2	Duelsome	2	0
3	Light Shell Bug	10	10
4	Magma Pevonia Fiend	1	0
5	Colossi Fiend	5	0
6	Magma Pevonia Fiend	1	0

Tactical Analysis

Wave 1: Focus on the Colossi Fiends first to build up to an Ultimate Technique, then use it to finish off one of the Duelsome.

If you can't get Duelsome alone to request the other Ultimate Technique don't be isolated on the Colossi Fiends. Wait until one of the Colossi Fiends are defeated before using it.

Defeat all the Colossi Fiends, then focus on the Duelsome to finish off the wave.

Wave 2: The safest strategy during this wave is to use attacks to take out the Light Shell Bugs. The slides will still work if get hit, but you'll be interrupted by the Light Shell Bugs' attacks.

Using the slide also makes it easier to avoid attacks from the Demon Bayonnets that fight alongside the Bugs.

Wave 3: Use your Cannon and Shield Generator Augmentations to the Colossi Fiends, then use Burst to close the gap.

If this isn't complete, attempt Demonic Bayonnet to finish yourself off. Use Burst to close the distance and Dashes to avoid attacks.

When only the Magma Pevonia Fiend remains, use arrows when its eyes glow to shift it into the Magma Fiend. Wait for the Magma Fiend to land on the ground, then use Strong Attacks to knock it up and use Quick Attack combos again.

If it escapes the dash or a Strong Attack hasten, slide away to regroup and request the Ultimate Technique. Use it on the Magma Fiend, then finish it off with Strong Attacks.

Wave 4: The worst thing will be the Demon Bayonnets and Colossi Fiends. When a total of two enemies remain, the Magma Pevonia Fiend will become Enraged.

Stay away from the Demon Bayonnet and use the Colossi Fiends to build up to an Ultimate Technique to use on the Demon Bayonnet.

When the Magma Pevonia Fiend appears, let it stay in the air until all the other enemies are dead. Keep the Magma Pevonia Fiend in the air with Strong Attacks, then finish it off with Strong Attacks.

Slide out of the way to avoid the attack, then continue assaulting the other enemies.

When only the Magma Pevonia Fiend remains, attack it with enemies when its eyes light up to bring out the Magma Pevonia Fiend, then follow the strategy from the first wave to finish it off.

When only the Magma Pevonia Fiend remains, attack it with enemies when its eyes light up to bring out the Magma Pevonia Fiend, then follow the strategy from the first wave to finish it off.

Acolyte I10

DIFFICULTY:

Mission Details

Wave	Enemy	Initial Force	Reinforcements
1	Tarnished (White)	5	0
2	Tarnished (Rocket Launcher White)	1	0
3	Heavy Soldier	2	0
4	Nomad (White)	3	0
5	Heavy Soldier (Jetpack)	1	0
6	Nomad	3	0
7	Assassin	2	0

Tactical Analysis

Wave 1: The first wave of this mission is the easiest. Take out the Tarnished (Rocket Launcher) first, then use Strong Attacks to finish off the Tarnished. Then take out the remaining Tarnished (White) and Nomads (White).

Use Arrow and Ultimate Technique freely to take down the enemies even faster.

Wave 2: The second wave is the most challenging wave in this mission (Jetpack). Use arrows to take out the Heavy Soldiers (Jetpack) while they're still in the air.

Once the Heavy Soldiers (Jetpack) land, the Jetpack Heavy Soldiers will be slightly easier than them. Use Burst to close the distance and Dashes to avoid attacks.

If they start to get close to you while still in the air, take them down as quickly as possible to avoid their various flame attacks.

When all the Jetpacks are Tarnished (White) are dead, use Arrow and Ultimate Technique again. Shoot arrows until it begins attacking with missiles, then slide to avoid the missiles and shoot an Ironic Arrow as you use Ultimate Technique.

Defeat all the Ironic Arrows, then switch to using your weapons. Use the same strategy to take it out and complete the wave.

Wave 3: The final wave opens up with three Archmonks and the waiting for the wings as reinforcements. Unlike the typical Archmonk encounter, these Archmonks will be flying and not Archmonks (White) and Archers.

The key to victory is tight sync Archmonks at a time. Slide to the turn of the platform and wait for one of the Archmonks to shoot. Dodge the attack and then shoot the opposite Archmonk with Ultimate Technique.

This breaks the Archmonk's Magic Shot, Shield and keeps it downed. If the Archmonk rolls out of the way or another one gets close, stop attacking and slide back to the opposite Archmonk to repeat.

Monster 01
Jaggi
Jaggia

★★★★★

Monster Details

Size	Ecology	Habit Type	Reinforcement
S	Pack Hunter	Herbivore	Jaggi
L	Pack Leader	Herbivore	Jaggi
S	Pack Hunter	Herbivore	Jaggia
L	Pack Leader	Herbivore	Jaggia

Tactical Analysis

Main 1: Effective and simple, these are the Monster Hunter equivalent of the Goblin from the Gaming universe.

Main 2: Jaggi and Jaggia are the first monsters you encounter in the game, and are the most basic of the Pack Hunters.

Main 3: The Jaggia are the evolved form of the Jaggi, with the main difference being the Jaggia's Crown.

Main 4: Jaggi and Jaggia will attack in packs of 4 and will attempt to surround the player and attack from behind.

Main 5: Once a Jaggi or Jaggia has been killed, the pack will attempt to flee the area. Jaggi will run away from the player, while Jaggia will run towards the player.

Main 6: Jaggi and Jaggia will attack with their Talons, which are the standard Basic Melee attack for Monsters.

Monster 02
Velocidrome
Velocidrome Tribe

★★★★★

Monster Details

Size	Ecology	Habit Type	Reinforcement
L	Pack Hunter	Herbivore	Velocidrome
L	Alpha Pack Hunter	Herbivore	Velocidrome
L	Pack Hunter	Herbivore	Velocidrome Tribe
L	Alpha Pack Hunter	Herbivore	Velocidrome Tribe
L	Scavenger	Herbivore	Velocidrome Tribe
L	Pack Leader	Herbivore	Velocidrome Tribe

Tactical Analysis

Main 1: Velocidrome are the Raptor equivalent in the Monster Hunter world. They are the first monsters you encounter that are capable of using Tools.

Main 2: The Velocidrome Tribe are the evolved form of the Velocidrome. They are the first monsters you encounter that are capable of using Tools.

Main 3: The Velocidrome Scavenger will attempt to steal Tools from the Velocidrome Tribe. If successful, it will run away from the player and attempt to flee the area.

Main 4: Velocidrome Pack Leaders will attempt to Roar at the player, which will cause the Pack Hunters to attack.

Velocidrome Alpha Pack Hunters will also Roar at the player, however they will not cause the Pack Hunters to attack.

Velocidrome Pack Hunters will also Roar at the player, however they will not cause the Pack Hunters to attack.

Velocidrome Scavengers will also Roar at the player, however they will not cause the Pack Hunters to attack.

Main 5: Velocidrome will attempt to surround the player and attack from behind.

Main 6: Velocidrome will attempt to flank the player and attack from the side.

Main 7: Velocidrome will attempt to ambush the player and attack from above.

Main 8: Velocidrome will attempt to retreat and attack from a distance.

Main 9: Velocidrome will attempt to use their Tools to attack the player.

Main 10: Velocidrome will attempt to use their Tools to defend themselves.

Main 11: Velocidrome will attempt to use their Tools to heal themselves.

Main 12: Velocidrome will attempt to use their Tools to buff themselves.

Main 13: Velocidrome will attempt to use their Tools to debuff the player.

Main 14: Velocidrome will attempt to use their Tools to debuff the Pack Hunters.

Main 15: Velocidrome will attempt to use their Tools to buff the Pack Hunters.

Main 16: Velocidrome will attempt to use their Tools to heal the Pack Hunters.

Main 17: Velocidrome will attempt to use their Tools to defend the Pack Hunters.

Main 18: Velocidrome will attempt to use their Tools to attack the Pack Hunters.

Main 19: Velocidrome will attempt to use their Tools to attack the Scavenger.

Main 20: Velocidrome will attempt to use their Tools to attack the Pack Leader.

Main 21: Velocidrome will attempt to use their Tools to attack the Alpha Pack Hunter.

Main 22: Velocidrome will attempt to use their Tools to attack the Pack Hunter.

Main 23: Velocidrome will attempt to use their Tools to attack the Velocidrome Tribe.

Main 24: Velocidrome will attempt to use their Tools to attack the Velocidrome.

Main 25: Velocidrome will attempt to use their Tools to attack the Jaggi.

Main 26: Velocidrome will attempt to use their Tools to attack the Jaggia.

Ninja Gaiden
Leader Mission Analysis

LEADER 01

DIFFICULTY

Mission Details

Wave	Enemy	Initial Force	Reinforcements
1	Shadow Fiend	5	10
1	Van Gelf Fiend	2	6
2	Assassin	2	6
2	Assassin (White)	3	9
3	High Van Gelf Fiend	2	4

Tactical Analysis

Wave 1: Depending on the player, Shadow Fiends and Van Gelf Fiends can both be difficult to handle. The Shadows swarm around you and are very agile, while the Vangelfs stay back and use projectile attacks.

If they decide to move in, you have to watch out for their Unblockable Lunging Grab.

If you choose to deal with the Shadow Fiends first, stay in one of the corners and wait for them to come to you. Be careful if they approach underground. They generally attempt an unblockable throw as soon as they reappear.

Use a basic Izuna Drop combo to take out each Shadow, but keep a close eye on the Vangelfs. Most of the time, they will be shooting a Fireball Projectile when they're in the distance.

If you continuously use Izuna Drop combos, the projectiles more often than not

Keep in mind that you cannot use an Obliteration Technique on the Shadow Fiends, but your ninja will attempt to attack them during their death animation as if they were susceptible to an Obliteration Technique.

This is why it's best to fight them in the corner when you have plenty of Shadows all in one area.

When going up against the Van Gelf Fiends, it's best to just rush them with a flurry of Quick Attacks.

If your Technique Level is high enough to have a Strong Attack combo, use that, but if you only have a single Strong Attack, stick to Quick Attack combos.

The Vangelfs have an Unblockable Grab at close range, but there's very little warning before the attack hits. This is why you need to take them down as quickly as possible at close range.

In most cases, this is easier to do after all the Shadows are down, so that you don't have to deal with the Shadows while attacking the Vangelfs.

Wave 2: The Assassins are, by far, the easiest part of the mission. The Assassin (White) has a little more health than the normal version, but both go down with a single Izuna Drop.

If they block your combos, use a slide into a Strong Attack to launch them into the air, then finish with an Izuna Drop, or use a single Strong Attack to launch them into the air and then perform a Jump Attack.

Wave 3: The last wave consists of six High Van Gelf Fiends that attack two at a time. In the first wave, you had to deal with two Van Gelf Fiends and the Shadow Fiends at the time, which makes this battle somewhat easier.

The lack of Shadow Fiends is a welcome change.

For the most part, it's best to fight the High Van Gelf Fiend just like you fought the normal Van Gelf. However, because there are more powerful, you have to take additional precautions.

If you feel confident in your ability to dodge the Fireball Projectiles, stay on one side of the area and attack the first High Vangelf to approach. If they do not approach, at the very least they will expend a little bit.

Attack the one that is closest to you.

The High Vangelf have the same amount of HP as the normal Vangelf, which means you can take them down just as quickly, and in the same manner.

Pay attention to the other High Vangelfs and slide away if a projectile attack is heading toward you, or another High Vangelf is closing in.

They are too difficult to take down one at a time, but in groups they become very troublesome. If you get hit by one of their unblockable attacks, it will inflict a significant amount of damage, so be cautious to avoid taking damage.

LEADER 02

DIFFICULTY

Mission Details

Wave	Enemy	Initial Force	Reinforcements
1	Tenrouki	3	9
1	Ghost Soldier	2	6
1	War Dog	3	9
2	Cetsus Fiend	4	12
2	Demon Bayhornet	2	4
3	Rocket Launcher	2	6
3	Heavy Soldier (Shield)	2	6
3	Alchemist	2	6

CAUTION

Your Health Gauge does not regenerate between the second and third waves.

Tactical Analysis

Wave 1: Start off the first wave of this mission by killing the War Dogs. If you let them live, they will attack with Unblockable Grabs that will cause unnecessary damage.

Once the War Dogs are down, focus on the Tenrouki, leaving the Ghost Soldiers for last. When only the Ghost Soldiers remain, use arrows to project their locations, then take them out one at a time.

Do not stand still or else they will use Unblockable Grabs. As long as you keep moving throughout this wave, you should not have any problems.

Wave 2: The second wave is significantly harder than the first wave. To make matters worse, your Health Gauge is not replenished between the second and third waves.

Stay away from the Demon Bayhornets and focus on the Cetsus Fiends instead.

Use them to build up your Ninja and Ultimate Techniques, then unleash both on the Demon Bayhornets to lessen their numbers while you finish off the Kotoraus.

When the Kotoraus are dead, take on one Demon Bayhornet at a time. There are nine total Demon Bayhornets and you must face them three at a time.

Keep an eye on the Bayhornets so you're not currently fighting and be prepared to slide away if they start attacking.

It will take a little longer to clear this wave, but if you try to engage more than one Demon Bayhornet at a time, you risk taking huge damage if you're not careful with your attacks.

Wave 3: At first glance, the third wave of this mission is relatively easy. However, you do not regain health between the second and third waves, which means you are more than likely going into this wave with minimal health.

Focus on the Rocket Launchers first, but if a Heavy Soldier (Shield) gets close to you, hit him with a Strong Attack to knock away his shield, then return to the Rocket Launchers.

As soon as you have Ninpo or an Ultimate Technique, focus the attack on the Alchemists. They attack with only two at a time, which makes this wave much easier than it would be otherwise.

If you can dwindle their numbers with Ninpo and Ultimate Techniques while still dealing out the Rocket Launchers and Shield Soldiers, this wave will be much easier.

When only the Alchemists remain, slide from one end of the area to the other, attacking the first enemy to follow. Repeat this process until all the Alchemists are dead.

LEADER 03

DIFFICULTY

Mission Details

Wave	Enemy	Initial Force	Reinforcements
1	Spider Ninja	3	9
1	Archer	2	4
1	Spider Talon Ninja	3	6
2	Hommuncus	6	8
2	Clufonia	0	6
2	Megasebion	0	4
2	Demon Bayhornet	0	3
3	Assassin (White)	1	10
3	Alchemist	1	10

Tactical Analysis

Wave 1: In terms of difficulty, this is the easiest of the Leader rank missions. However, that doesn't mean this is an easy mission. The first wave is relatively simple, but the battle against the Spider Talon Ninja can be a bit tedious.

Build up Ultimate Techniques by killing the Spider Ninja and Archers, then get close to one of the Spider Talon Ninja and initiate the Ultimate Technique.

If you can tell two or three Talon Ninja with your first Ultimate Technique, this wave becomes much easier.

Defeating the Spider Ninja and Archers also builds up a Dark Void Ninpo, but the Talon Ninja become very evasive when you start charging the Ninpo.

Aim at the Talon Ninja if you can, but if they are too evasive, focus on taking out the Spider Ninja and Archers instead.

Wave 2: This wave starts with six Hommuncus and nine reinforcements. Kill one Hommuncus at a time and wait for it to turn into a Megasebion if it doesn't do so automatically. Hommuncus and the Clufonia appear at once.

Wait until the Megasebion or Clufonia gets close to a Hommuncus, then attack the Hommuncus with a Quick Attack combo to initiate a Steel on Bone technique.

If the Megasebion or Clufonia is close enough to the Hommuncus when the Steel on Bone technique is initiated, your next attack will hit the Megasebion or Clufonia for a single blow.

Repeat this process for the remaining Megasebions and Clufonia.

When all of the Hommuncus are down, two Demon Bayhornets appear alongside however many Megasebions and Clufonia remain. If you follow the Hommuncus at a time, only one enemy should be left along with the two Bayhornets.

Take out that enemy first, then focus on the Bayhornets. No matter how many enemies remain, leave the Bayhornets last because they are the strongest enemies in the wave.

If you have difficulty setting up the Steel on Bone to kill the Megasebions and Clufonia, you should still limit the number of Hommuncus killed so that you fight only one Megasebion or Clufonia at a time.

This makes the wave significantly easier to get through.

A single Megasebion or Clufonia is easy to take care of, even if several Hommuncus are in the immediate area. Multiple Megasebions or Clufonias can be tough to deal with, especially if they're attacking simultaneously.

Just stay clear of the Hommuncus while engaging each Megasebion or Clufonia, because they will use an Unblockable Grab if they get near you.

Wave 3: The beginning of this wave is pretty easy. There's one Assassin (White) and one Alchemist. However, there are 10 reinforcements for each that spawn in groups so you defeat the initial forces.

For both groups of enemies, when the first initial force is killed, two reinforcements join the battle. When both reinforcements are dead with, two more spawn.

When the second set of dual-reinforcements is taken care of, a group of three more appear. Defeat those three and a final group of three more will join the fight.

The key to this wave is to focus on one enemy type at a time. To make things easier, focus on the Assassins (White) because they're much easier to defeat.

As long as you stay clear of the Alchemist, you'll only have to deal with avoiding one of them while engaging the Assassins.

If the Alchemist starts attacking with projectiles, use a single Strong Attack to temporarily silence his magic powers, then continue fighting the Assassins.

When all 11 Assassins are dead, target the Alchemist. The first one is easy to deal with because there's only one. When the next one appears, attack one of the follow, just take them out one at a time.

Slide from one side of the area to the other, and attack only the first Alchemist that follows. When the others close in, stick to the other side and repeat the process.

LEADER 04

DIFFICULTY

Mission Details

Wave	Enemy	Initial Force	Reinforcements
1	Cetsus Fiend	3	9
1	Demon Bayhornet	2	4
1	Magna Persona Fiend	1	1
2	Spider Talon Ninja	3	9
2	Spider Aya Ninja	4	8
3	Spider Talon Ninja	0	6
3	Demon Genshin	1	0

Tactical Analysis

Wave 1: Target the Cetsus Fiends first to build up a Dark Void Ninpo and Ultimate Technique.

If you feel confident fighting two Bayhornets at once, while assisting projectile attacks from a Magna Persona, then leave the Magna Persona, and use the Ultimate Technique on the Bayhornets.

Use an Ultimate Technique on it before you Ninpo, because a single Dark Void Ninpo is not enough to kill a Bayhornet.

It's also imperative that you wait until you're right next to the Bayhornet before initiating the Ultimate Technique so that it doesn't attack the other enemies instead.

When only the Magna Persona Fiend remains, shoot it down and take it on.

Wave 2: This is the easiest of the three waves in this mission. The Talon Ninja can be frustrating to deal with because they're evasive and difficult to hit.

Focus on the Aya Ninja to build up an Ultimate Technique, then use it close to a Talon Ninja. When you have a Dark Void Ninpo available, try to aim it at the Talon Ninja, but if they're too evasive, target the Aya Ninja instead.

Wave 3: The battle starts with Demon Genshin by himself. He fights very similar to the normal version of Genshin, which means it's important to wait for him to attack, then counterattack when he combo finishes.

If you try to attack before his combo concludes, or get too aggressive, he will interrupt with an attack of his own and inflict significant damage.

If you see him charge up for what looks like an Ultimate Technique, slide away as quickly as possible to avoid taking damage.

Paying close attention to the Talon Ninja that appear will help you keep track of how much health Genshin has left. When he reaches 75 percent health, the first two Talon Ninja appear.

Take them out as soon as they appear because another pair Talon Ninja appear when Genshin reaches 50 percent health, followed by two more at 25 percent.

Fighting Demon Genshin alone is hard enough due to the sheer damage he inflicts with each attack. If you have to deal with six Talon Ninja at the same time, the fight becomes far more difficult than it has to be.

LEADER 05

DIFFICULTY

Mission Details

Wave	Enemy	Initial Force	Reinforcements
1	Tenrouki (White)	3	9
1	Tenrouki (Rocket Launcher-White)	1	7
2	Heavy Soldier (White)	2	6
2	Assassin (White)	3	6
2	Heavy Soldier (Jetpack)	2	6
2	Heavy Soldier (White)	2	6
2	War Dog	4	0
3	LCM Chairman	1	0

Tactical Analysis

Wave 1: The first two waves of this mission are fairly straightforward and not particularly difficult. Take out the Rocket Launchers first to build up Ninpo and an Ultimate Technique.

Use both Ninpo once you have them, then the Rocket Launchers are down, focus on the Tenrouki (White) to build up another Ninpo and Ultimate Technique.

With only the Heavy Soldiers (White) remaining, finish them off with Izuna Drop combos. If they block your combos, use a Strong Attack to stun them, then go for an Izuna Drop or a combo of your choice.

Wave 2: The second wave is a little harder than the first wave because of the Heavy Soldiers (Jetpack). Use arrows to take them out of the sky and turn them into Heavy Soldiers (White).

If the War Dogs get in the way, take them out while staying clear of the Jetpacks to avoid their Flamethrower attacks.

There are 12 Jetpack Soldiers, but it's important to take them down quickly so you don't have to worry about these highly damaging attacks.

When the Jetpacks are taken care of, shift your focus to the remaining War Dogs. It will alone, the War Dogs can interrupt your attacks and make it difficult to engage the other enemies.

After taking down the War Dogs, target the Assassins and Heavy Soldiers (White). The Assassins are a little easier to kill because they do not block as much, but both are relatively simple to take down.

Wave 3: The last wave of this mission consists of only the LCM Chairman in his giant mech. He's twice a strong as he was when you faced him in the story mode and takes a considerable amount of attacks to bring down.

In addition, the missiles in his fists form track you much better than they did before. Fight both forms just like you did in story mode, but when you're close to the mech, watch the top of its back where the missiles originate.

If you see missiles heading toward you, slide to avoid them.

If you follow the original strategy to defeat this boss, the battle isn't very hard. The issue here is the length of the battle.

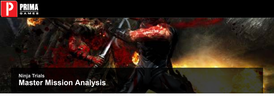
Due to the increased health and strength of the LCM Chairman, the longer the battle lasts, the more important it is to avoid taking damage. Pay close attention to the missiles.

They are easy to avoid if you're looking for them, but if you're too focused on attacking the Chairman, the missiles can easily catch you by surprise.

When the right arm is pounding the ground, stay close enough to slide in an attack, but outside of the Electric Field range.

This is a little more difficult than it sees in the story mode because the missiles make it hard to stay in one spot.

When you slide to avoid the missiles, slide along the outside of the Electric Field to stay close to the mech while still avoiding the missiles.



Ninja Trials

Master Mission Analysis

MASTER 01

DIFFICULTY:

Mission Details

Wave	Enemy	Initial Force	Reinforcements
1	Spider Ninja	2	4
1	Spider Talon Ninja	2	4
1	Epigonos	1	0
2	Spider Aya Ninja	2	2
2	Ourbonos	0	2
2	Epigonos Final Form	1	0

Tactical Analysis

Wave 1: At the onset of this wave, stay away from the center of the area and locate the Epigonos. He blends in with the other Ninja and the area, so it's important to pinpoint his location and keep an eye on him.

Do not engage him yet; instead take out the Spider Ninja and Talon Ninja first. When you have Ninjoo or an Ultimate Technique available, try to use it on the Epigonos, but if you can't target him, just take out the other Ninja instead.

When only the Epigonos remains, wait for him to start a combo and slide to avoid the third and fifth attacks. When the combo ends, hit him with an Izuna Drop combo.

As long as you avoid the third and fifth attacks in his combos, he'll have a hard time inflicting damage. It will take quite a few Izuna Drops to finish him off, but this is not a difficult battle.

Wave 2: There are only two waves in this mission, but both feature an Epigonos. The second wave has the Epigonos in his Final Form. Take out the four Aya Ninja first so you don't have to worry about their magic attacks.

The reinforcements for the Aya Ninja and the Ourbonos spawn based on how much health the Epigonos has. When the Epigonos hits 50 percent health, no more Aya reinforcements will spawn.

Instead, the Ourbonos will appear one at a time.

If you feel confident that you can avoid the Aya's attacks while engaging the Epigonos, focus solely on the Hayabusa clone. When the Epigonos reaches 50 percent health, and the Ourbonos appears, take down the two Aya Ninja.

No matter how you decide to face this fight, when the Ourbonos appears, shift your focus to them instead of the Epigonos.

They attack one at a time, which makes it relatively easy to finish off the two Ourbonos and continue attacking the Epigonos.

Fight the Epigonos Final Form just like you did in the story mode. Wait for it to switch to the Dragon Sword, then slide to avoid its combos and attack with an Izuna Drop.

Watch out for long-range attacks when it's using the scythe, and a quick slide when it's using the Dragon's Claw.

MASTER 02

DIFFICULTY:

Mission Details

Wave	Enemy	Initial Force	Reinforcements
1	Light Shell Bug	3	21
1	Ourbonos	3	9
1	Megaseidon	3	6
2	Shadow Fiend	3	6
2	Van Gelf Fiend	2	4
2	High Van Gelf Fiend	1	3
3	Ourbonos	1	3
3	Megaseidon	0	4
3	Goddess Prototype	1	1

Tactical Analysis

Wave 1: Under normal circumstances, the first wave of this mission would not be overly difficult. However, with the small area you must fight in, and the large number of enemies, this becomes a much more difficult battle.

The Megaseidons are very aggressive, but avoid them as much as you can to focus on the Light Shell Bugs.

Alone, the Bugs are easy to extinguish, but with all the other enemies around, they can quickly become a difficult foe if they're not dealt with quickly.

If you have trouble avoiding the Megaseidons or Ourbonos, continuously slide around the area, aiming for the Bugs. Two slides is enough to take out the Bugs.

When the Light Shell Bugs are down, shift your attention to the Ourbonos. They go down faster than the Megaseidons and you can use their deaths to build up to an Ultimate Technique.

Any time you have an Ultimate Technique available during this mission, get close to the Megaseidons and try to target them with it.

You will have to stay on the move throughout most of this fight, so if you have difficulty executing an Ultimate Technique near a Megaseidon, just use it as soon as possible to clear out any of the enemies.

With only the Megaseidons left, this becomes a much easier battle.

The close quarters combat is still your greatest foe, but without the Light Shell Bugs and Ourbonos to contend with, the Megaseidons go down without too much of a hassle.

Try to focus on attacking the same Megaseidon until it goes down, but if you have trouble doing this, just attack the closest enemy.

Wave 2: Once again, the size of the battle area makes this fight far more difficult than it would normally be. Take down the Shadows first, but if the High Vangelf or the Vangelfs get in your way, attack whichever enemy is closest.

The Shadow Fiends are more agile and harder to keep track of compared to the larger Vangelf and High Vangelf, so whenever possible, use a quick Izuna Drop to take out as many Shadows as possible.

With the Shadows down, it's a toss-up as to which enemy you should target next. Both the Vangelf and High Vangelf are formidable opponents and fight almost exactly the same.

The best strategy is to focus on one at a time, but if another enemy gets close, slide away as quickly as possible. It will take longer to defeat all the enemies, but you do not want to get attacked by two or more enemies at once.

Wave 3: This wave begins with one Goddess Prototype and one Ourbonos. When the Ourbonos is defeated, one Megaseidon appears.

From this point forward, the Ourbonos and Megaseidons attack one at a time, alternating between the two (one Ourbonos, then one Megaseidon).

Ignore the Prototype and focus on the Ourbonos and Megaseidons first. When all eight of them are down, then shift your attention to the first of two Prototypes.

The fight against the Prototype is very similar to the story mode battle, but this variant is stronger and takes longer to defeat.

Follow the same strategy as before, sliding to avoid her combos when she has normal arms, waiting for the Acid Spray when she has tentacle arms, and avoiding her attacks with Demon arms.

MASTER 03

DIFFICULTY:

Mission Details

Wave	Enemy	Initial Force	Reinforcements
1	High Van Gelf Fiend	2	2
2	Genshin	2	0
3	Epigonos	1	1
3	Epigonos Final Form	0	1

Tactical Analysis

Wave 1: Fighting two High Van Gelf Fiends at a time isn't all that tough. The main strategy is to know where the other High Vangelf is at all times.

The High Vangelfs go down pretty easily, and although you may take an Unblockable Grab here and there, if you attack with a constant barrage of Quick Attack or Strong Attack combos, the four High Vangelfs will go down before you do.

When the wave is over, your Health Gauge is replenished for the battle against two Genshins.

However, if you lose track of the second High Vangelf, it can attack from your blind side with its Fireball Projectile or its Unblockable Lunging Grab. Both have very good range and both inflict significant damage.

If you can avoid these, getting hit with an Unblockable Grab or two will not end the mission for you. Just keep both High Vangelfs in close range at all times. This is a large stage, so it's easy for one to escape your new and get lost.

Wave 2: The two Genshins are arguably the hardest part of this mission. Fighting one Genshin is hard enough, but fighting two can be difficult.

The stage is fairly large, so position yourself as far away from the two enemies as possible. When one of them closes in, wait for it to attack, evade his combo, then counter with an Izuna Drop combo.

If the other Genshin gets close, slide away and regroup.

Genshin hits very hard, so it's extremely important to engage only one of them at a time. It's also very helpful if you can keep track of which Genshin you're attacking so that you can continually attack the same Genshin.

When one Genshin is down, it's much easier to take out the last remaining Genshin.

Wave 3: This wave begins with a single Epigonos. When the first Epigonos is down, a second one appears, and after the normal Epigonos is defeated, the Epigonos Final Form spawns.

Deal with the first two Epigonos by waiting for them to attack, sliding to avoid the third and fifth attacks in their combos, then countering with an Izuna Drop.

When facing off against the Epigonos Final Form, stay away from him until he switches to the Dragon Sword, then use the same strategy from fighting the normal Epigonos.

MASTER 04

DIFFICULTY:

Mission Details

Wave	Enemy	Initial Force	Reinforcements
1	Terrorist (White)	2	4
1	Rocket Launcher	2	4
1	Ghost Soldier	0	4
1	Assassin (White)	3	6
1	Heavy Soldier (White)	3	6
2	Alchemist	3	3
2	Regent of the Mask	1	1

Tactical Analysis

Wave 1: Under normal circumstances, the best strategy for this wave would be to take down the Rocket Launchers first, followed by the Terrorists (White).

While you should still take down the Rocket Launchers first, leave the Terrorists (White) for last. The reason for this is because the Ghost Soldiers do not appear until the Terrorists (White) are all dead.

Take down the Rocket Launchers, then take your pick between the Heavy Soldiers (White) and Assassins. This wave is relatively easy compared to most of the other waves in the Master Ninja missions.

When only a few enemies and the Terrorists remain, take them out, but save your last Ultimate Technique until the Ghost Soldiers spawn.

While it's easy enough to use arrows to pinpoint the location of the Ghost Soldiers, it's even easier to unleash an Ultimate Technique and take out three of them right off the bat.

Wave 2: The second wave of this mission starts off with one Regent of the Mask accompanied by three Alchemists.

Usually this would not be a big problem, but the Regent of the Mask is two and a half times stronger than when you fought him during the story mode.

The strategy to defeat him hasn't changed, and after facing him so many times in the story mode you should have it down to a science by now, but it will take much longer to bring him down.

Start off by staying away from the first Regent of the Mask and focusing on the Alchemists instead. They fight three at a time, which isn't too difficult.

However, you should still isolate one to fight by sliding from one end of the area to the other. This is made slightly more difficult by the fact that you need to avoid the Regent of the Mask as well.

It will take a little longer to take down the six Alchemists, but it's important to fight cautiously and avoid taking unnecessary damage.

When only the Regent of the Mask remains, follow the standard strategy to defeat him, but be more careful than normal. There's a second Regent of the Mask that spawns when the first one dies.

As this is a Master Ninja mission, your retries are limited and you don't want to have to start over at the beginning of the mission again. Only attack after evading a combo, and do not use full combos.

Use one or two attacks, then slide away in case the Regent of the Mask attempts an Unblockable Grab.

MASTER 05

DIFFICULTY:

Mission Details

Wave	Enemy	Initial Force	Reinforcements
1	Epigonos Final Form	3	3

Tactical Analysis

Wave 1: There's only one wave in this mission, but it consists of six Epigonos in his Final Form, fighting three at a time. Unfortunately, there's no easy way to approach this fight.

All the Epigonos are relatively aggressive, and even if you wait until one is using the Dragon Sword, it's still best to let him attack, then counterattack with an Izuna Drop.

However, that's difficult to do when you need to stay away from any Epigonos using the scythe.

And if any of the Epigonos are using the Dragon's Claw, they can attack very quickly, making it difficult to evade while trying to engage another Epigonos.

Luckily, the battle area is relatively large, which gives you plenty of room to move around. Stay on one side of the area and wait until one of the Epigonos changes to the Dragon Sword.

If he's away from the other two, rush over to him and wait for a combo. Evade the third and fifth attacks, then counter with an Izuna Drop.

You may have to take some risks because the Epigonos are rarely far apart, so pay close attention to the other two Epigonos and quickly move away if they approach.

Ninja Trials

Ultimate Mission Analysis

ULTIMATE 01

DIFFICULTY:

Mission Details

Wave	Enemy	Initial Force	Reinforcements
1	Spider Ninja	1	6
1	Archers	1	6
1	Spider Talon Ninja	3	6
1	Spider Aya Ninja	2	4
2	Archer	3	6
2	Spider Talon Ninja	2	4
2	Genshin	1	0
3	Genshin	2	3
3	Demon Genshin	0	2

Tactical Analysis

Wave 1: This entire mission is essentially one big battle against the Black Spider Clan.

It starts off with a small group of Spider Ninja, Archers, Talon Ninja, and Aya Ninja. Focus on the Archers first, and leave the Talon Ninja for last because they're the most difficult of the enemies in this wave.

When you build up to an Ultimate Technique, get close to one of the Talon Ninja before executing it.

Any Talon Ninja you can take out with Ninpo or an Ultimate Technique makes one less troublesome Ninja to worry about.

Wave 2: Stay away from Genshin because his attacks inflict a great deal of damage, and take out the Archers first in this wave of enemies.

Use your Ultimate Technique near one of the Talon Ninja dwindle their numbers while engaging the Archers. When the Archers are down, shift your attention to the Talon Ninja.

They block a good number of attacks and counter with bombs. Be ready to slide away if you're too close to the bombs. Stay on top of the Talon Ninja with Quick and Strong Attacks, but never let Genshin out of your sight.

When only Genshin remains, evade his combos and counter with an Izuna Drop. This version of Genshin is two times as strong as the previous fights and it takes a considerable amount of Izuna Drops to defeat him.

To make matters worse, it doesn't take many attacks from Genshin to take you down, so you have to be very careful to attack only after he's finish a combo, and avoid his attacks at all cost.

Wave 3: This is a very difficult battle that begins with a fight against two Genshins at double the strength of the normal Genshin (the same as he was in the second wave).

Fight him exactly the same as you did in the second wave, except keep a close watch on the other Genshin so you can avoid his attacks.

There are a total of five Genshins that you must defeat, but luckily they only attack two a time.

However, because of the large number of enemies and the fact that you have a very limited number of retries, it is extremely important to fight as cautiously as possible and not take unnecessary risks.

This is a long and drawn out fight, but it's better than having to start over at the beginning of the mission.

When only two Genshins remain, alternate between the two. Try to deal equal damage to each so that when one dies, the other is close to death.

When there's only one Genshin left, two Demon Genshins at twice their normal strength appear.

If you can hit the last remaining Genshin with one or two Izuna Drops to finish him off, it will make the battle against two Demon Genshins much easier.

Two Demon Genshins are hard enough, but toss a regular Genshin into the mix and it becomes even harder.

Once again, you must be extremely careful against the two Demon Genshins. It only takes a few attacks for either of them to take you down.

Even if you have a retry left to use, you'd have to go through the five normal Genshins to make it back to this point.

Do not be overly aggressive and wait until after Demon Genshin ends a combo before you attempt an attack.

Slide from one end of the area to the other in an effort to separate the two Demon Genshins, and avoid attacking one if the other is close enough to attack you.

ULTIMATE 02

DIFFICULTY:

Mission Details

Wave	Enemy	Initial Force	Reinforcements
1	Terrorist (White)	3	9
1	Assassin (White)	3	9
1	Heavy Soldier (White)	2	6
2	Ghost Soldier	3	6
2	Alchemist	3	6
3	Terrorist (Rocket Launcher-White)	2	4
3	Assassin (White)	2	6
3	Heavy Soldier (Shield)	3	6
4	Alchemist	3	9
4	Regent of the Mask	2	0

Tactical Analysis

Wave 1: The previous mission was basically a battle against the entire Black Spider Clan, and this mission is essentially a battle against the LOA Army.

The first wave is fairly tame, with an assortment of soldiers that are all relatively easy to deal with.

Save the Heavy Soldiers (White) for last because they block more of your attacks than any of the other soldiers.

Use Ninpo and Ultimate Techniques as you get them to make this battle go a little faster.

Wave 2: Ignore the Ghost Soldiers and focus on the Alchemists. The Ghost Soldiers will drop bombs, but if you watch out for them, they do not pose much of a threat.

Slide back and forth across the area to isolate each Alchemist and take them down, then use arrows to find the Ghost Soldiers.

Wave 3: Focus on the Rocket Launchers in the third wave, then use Strong Attacks to remove the shields from the Shield Soldiers and turn them into normal Heavy Soldiers.

The Assassins should be your second focus because their daggers can be difficult to contend with at times. When the Assassins are down, take care of the remaining Heavy Soldiers.

Wave 4: The last wave in this mission is the hardest. Ignore the two Regent of the Masks as best you can while you isolate the Alchemists and take them down one at a time.

When all 12 Alchemists are down, you can now focus on the two Regent of the Masks. Both are relatively aggressive, and are two and a half times the strength of the normal Regent of the Mask.

It's important to take every opportunity to attack so this fight is not drawn out any longer than it has to be.

Treat the Regent of the Masks like you would the Alchemists and slide from one end of the area to the other in an attempt to separate them.

With the Regent of the Masks being as aggressive as they are, it won't be hard to get them to chase after you, which naturally separates them for a short time.

Use this opportunity to get in a couple of Quick or Strong Attacks, but do not get carried away. It does not take many Unblockable Grabs to end this mission prematurely.

ULTIMATE 03

DIFFICULTY:

Mission Details

Wave	Enemy	Initial Force	Reinforcements
1	Epigonos	1	2
2	Epigonos	1	0
2	Epigonos Final Form	1	0
3	Epigonos	2	0
3	Epigonos Final Form	0	3

Tactical Analysis

Wave 1: This entire mission is against either the normal Epigonos, his Final Form, or both at the same time. The first wave starts with one Epigonos, but when he's defeated, two more appear to take his place.

In addition, all three Epigonos are stronger than the Epigonos you faced in previous missions.

It takes only a few hits to kill you. Slide back and forth across the area in an attempt to separate the Epigonos so you can fight them one at a time.

Luckily, because these are the normal Epigonos you don't have to wait for them to change weapons.

Wave 2: Unlike the previous wave, in this wave the Epigonos and Epigonos Final Form fight against you at the same time.

Focus on the normal Epigonos first because you don't have to wait for him to change weapons. However, keep the Epigonos Final Form in sight at all times.

If he's using the scythe, get away from him and wait for him to switch to one of the other two weapons before you even attempt to fight the normal Epigonos anywhere near him.

When only the Epigonos Final Form remains, wait for him to switch to the Dragon Sword before you attack. Once he's using the Dragon Sword, wait for him to end a combo before you attempt a counterattack with an Izuna Drop.

Wave 3: This wave starts off a little easier than the last because you only have to fight two Epigonos in their original forms (although much stronger than normal).

However, when those two are down three Epigonos Final Forms appear simultaneously. No matter how you approach the three Final Form Epigonos, this is a tough battle.

Slide from one end of the area to the other and wait patiently for one of the Epigonos to change to the Dragon Sword.

When this happens, as long as the other two are not close by with any weapon other than the Dragon Sword, move in and wait for a combo.

Slide to avoid the third and fifth attacks, then counter with an Izuna Drop.

This is a very long and drawn out fight, but unfortunately there's no way to make this battle go any faster. If you rush your attacks, you will get hit and you will die quickly.

Even if only one of the Epigonos is attacking you, it needs to land only a small number of attacks to kill you.

The Path of the Ninja
Basics

NOTE

The majority of the strategies provided in the story mode walkthrough are devised for the Hard play style (difficulty) setting. If no play style is mentioned, assume the text is referring to Hard mode.

All boss battle strategies presented were formulated while playing through the Hard difficulty setting. However, we also give strategy adjustments for Normal, Master Ninja, and Ultimate Ninja (DLC) difficulties listed for each boss battle.

Tutorial Button Prompts (TBP)

Throughout the game, button notations appear on-screen, requiring you to press specific buttons (sometimes rapidly) or directions.

These are called Tutorial Button Prompts or TBPs. You have a decent amount of time to input the command on-screen, but do not take your time.

In many cases, if you wait too long to input the command, Hayabusa may take damage or even die. TBPs are also used for Steel on Bone techniques and during boss battles.

Ninpo and Ultimate Technique Usage

Ninpo and Ultimate Technique Usage

Ninpo Icon

Ninpo and Ultimate Technique Usage

Ultimate Technique icon

In most situations, it's okay to use Ninpo and Ultimate Techniques whenever you choose. However, in some cases, it's strategically beneficial to save one or both of Hayabusa's abilities for a specific enemy or upcoming battle.

In these instances, an icon appears in the walkthrough to indicate that one or both abilities should be saved for a specific instance. If these icons are not present, feel free to use Ninpo and Ultimate Techniques freely.

NOTE

When discussing specific Ninpo or Ultimate Technique usage, it is assumed you are playing on the Hard difficulty settings.

Ninpo and Ultimate Technique usage will vary on other difficulty settings because both techniques can be accessed more often on easier difficulty settings and less often on harder settings.

Any text in red (aside from boss battle text) discusses the changes when playing on the Master Ninja play style.

In addition to the changes discussed, enemies are far more aggressive on Master Ninja and there are almost always nearly double the amount of enemies during each engagement.

Daily Details

At the start of each chapter is a list of details about the day. These details provide a brief overview of the day, including the first in-game appearance of enemies that can be found in the day, as well as the number of maps for the day and any sub- or final bosses.

First Appearance

Ryu Hayabusa encounters a wide variety of enemies throughout his eight-day adventure. When an enemy makes its initial appearance, the First Appearance section provides brief insight into how to attack or defeat the enemy.

NOTE

The details for each new enemy appearance are a general summary of the enemy. For complete information on each enemy, refer to the Ninja Enemies chapter.

Hello Wanderer!

Welcome to the first Dev Diary for Build 2 of Rise of the Ashen City. Here, we'll be sharing a look at the new map, Ashen City, and the new Boss, Ashen Knight.

Ashen City

Ashen City is the first of two new maps coming in Build 2. It's a large, open map with a mix of ruins, forests, and a central city area. The map is designed to encourage exploration, with many hidden paths and secrets to discover.

The map is also home to a new type of enemy, the Ashen Soldier. These soldiers are armed with swords and shields, and they can be found patrolling the streets of the city.

Ashen Knight

The Ashen Knight is a powerful boss that can be found in the center of the city. He is armed with a large sword and shield, and he can summon Ashen Soldiers to help him in battle.

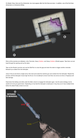
The Ashen Knight has a variety of attacks, including a powerful sword slam and a ranged attack that shoots fireballs. He can also summon Ashen Soldiers to help him in battle.

The Ashen Knight is a challenging boss, but he can be defeated with the right strategy. Players will need to use their dodge and block skills to avoid his attacks, and they will need to focus on taking down the Ashen Soldiers before they can overwhelm him.

Conclusion

We hope you enjoyed this first Dev Diary for Build 2 of Rise of the Ashen City. We're excited to share more with you in the coming weeks, including a look at the new weapons and abilities that will be available in Build 2.

Thanks for reading!



Tall Trees, Sequoia Head (Day 4)

Quick Details

Map Name: Tall Trees, Sequoia Head (Day 4)
Difficulty: Normal
Objectives: Find the Sequoia Head. Activate the Sequoia Head. Survive the Sequoia Head's attack. Find the Sequoia Head's second head. Activate the Sequoia Head's second head. Survive the Sequoia Head's second attack. Find the Sequoia Head's third head. Activate the Sequoia Head's third head. Survive the Sequoia Head's third attack. Find the Sequoia Head's fourth head. Activate the Sequoia Head's fourth head. Survive the Sequoia Head's fourth attack. Find the Sequoia Head's fifth head. Activate the Sequoia Head's fifth head. Survive the Sequoia Head's fifth attack. Find the Sequoia Head's sixth head. Activate the Sequoia Head's sixth head. Survive the Sequoia Head's sixth attack. Find the Sequoia Head's seventh head. Activate the Sequoia Head's seventh head. Survive the Sequoia Head's seventh attack. Find the Sequoia Head's eighth head. Activate the Sequoia Head's eighth head. Survive the Sequoia Head's eighth attack. Find the Sequoia Head's ninth head. Activate the Sequoia Head's ninth head. Survive the Sequoia Head's ninth attack. Find the Sequoia Head's tenth head. Activate the Sequoia Head's tenth head. Survive the Sequoia Head's tenth attack. Find the Sequoia Head's eleventh head. Activate the Sequoia Head's eleventh head. Survive the Sequoia Head's eleventh attack. Find the Sequoia Head's twelfth head. Activate the Sequoia Head's twelfth head. Survive the Sequoia Head's twelfth attack. Find the Sequoia Head's thirteenth head. Activate the Sequoia Head's thirteenth head. Survive the Sequoia Head's thirteenth attack. Find the Sequoia Head's fourteenth head. Activate the Sequoia Head's fourteenth head. Survive the Sequoia Head's fourteenth attack. Find the Sequoia Head's fifteenth head. Activate the Sequoia Head's fifteenth head. Survive the Sequoia Head's fifteenth attack. Find the Sequoia Head's sixteenth head. Activate the Sequoia Head's sixteenth head. Survive the Sequoia Head's sixteenth attack. Find the Sequoia Head's seventeenth head. Activate the Sequoia Head's seventeenth head. Survive the Sequoia Head's seventeenth attack. Find the Sequoia Head's eighteenth head. Activate the Sequoia Head's eighteenth head. Survive the Sequoia Head's eighteenth attack. Find the Sequoia Head's nineteenth head. Activate the Sequoia Head's nineteenth head. Survive the Sequoia Head's nineteenth attack. Find the Sequoia Head's twentieth head. Activate the Sequoia Head's twentieth head. Survive the Sequoia Head's twentieth attack. Find the Sequoia Head's twenty-first head. Activate the Sequoia Head's twenty-first head. Survive the Sequoia Head's twenty-first attack. Find the Sequoia Head's twenty-second head. Activate the Sequoia Head's twenty-second head. Survive the Sequoia Head's twenty-second attack. Find the Sequoia Head's twenty-third head. Activate the Sequoia Head's twenty-third head. Survive the Sequoia Head's twenty-third attack. Find the Sequoia Head's twenty-fourth head. Activate the Sequoia Head's twenty-fourth head. Survive the Sequoia Head's twenty-fourth attack. Find the Sequoia Head's twenty-fifth head. Activate the Sequoia Head's twenty-fifth head. Survive the Sequoia Head's twenty-fifth attack. Find the Sequoia Head's twenty-sixth head. Activate the Sequoia Head's twenty-sixth head. Survive the Sequoia Head's twenty-sixth attack. Find the Sequoia Head's twenty-seventh head. Activate the Sequoia Head's twenty-seventh head. Survive the Sequoia Head's twenty-seventh attack. Find the Sequoia Head's twenty-eighth head. Activate the Sequoia Head's twenty-eighth head. Survive the Sequoia Head's twenty-eighth attack. Find the Sequoia Head's twenty-ninth head. Activate the Sequoia Head's twenty-ninth head. Survive the Sequoia Head's twenty-ninth attack. Find the Sequoia Head's thirtieth head. Activate the Sequoia Head's thirtieth head. Survive the Sequoia Head's thirtieth attack. Find the Sequoia Head's thirty-first head. Activate the Sequoia Head's thirty-first head. Survive the Sequoia Head's thirty-first attack. Find the Sequoia Head's thirty-second head. Activate the Sequoia Head's thirty-second head. Survive the Sequoia Head's thirty-second attack. Find the Sequoia Head's thirty-third head. Activate the Sequoia Head's thirty-third head. Survive the Sequoia Head's thirty-third attack. Find the Sequoia Head's thirty-fourth head. Activate the Sequoia Head's thirty-fourth head. Survive the Sequoia Head's thirty-fourth attack. Find the Sequoia Head's thirty-fifth head. Activate the Sequoia Head's thirty-fifth head. Survive the Sequoia Head's thirty-fifth attack. Find the Sequoia Head's thirty-sixth head. Activate the Sequoia Head's thirty-sixth head. Survive the Sequoia Head's thirty-sixth attack. Find the Sequoia Head's thirty-seventh head. Activate the Sequoia Head's thirty-seventh head. Survive the Sequoia Head's thirty-seventh attack. Find the Sequoia Head's thirty-eighth head. Activate the Sequoia Head's thirty-eighth head. Survive the Sequoia Head's thirty-eighth attack. Find the Sequoia Head's thirty-ninth head. Activate the Sequoia Head's thirty-ninth head. Survive the Sequoia Head's thirty-ninth attack. Find the Sequoia Head's fortieth head. Activate the Sequoia Head's fortieth head. Survive the Sequoia Head's fortieth attack. Find the Sequoia Head's forty-first head. Activate the Sequoia Head's forty-first head. Survive the Sequoia Head's forty-first attack. Find the Sequoia Head's forty-second head. Activate the Sequoia Head's forty-second head. Survive the Sequoia Head's forty-second attack. Find the Sequoia Head's forty-third head. Activate the Sequoia Head's forty-third head. Survive the Sequoia Head's forty-third attack. Find the Sequoia Head's forty-fourth head. Activate the Sequoia Head's forty-fourth head. Survive the Sequoia Head's forty-fourth attack. Find the Sequoia Head's forty-fifth head. Activate the Sequoia Head's forty-fifth head. Survive the Sequoia Head's forty-fifth attack. Find the Sequoia Head's forty-sixth head. Activate the Sequoia Head's forty-sixth head. Survive the Sequoia Head's forty-sixth attack. Find the Sequoia Head's forty-seventh head. Activate the Sequoia Head's forty-seventh head. Survive the Sequoia Head's forty-seventh attack. Find the Sequoia Head's forty-eighth head. Activate the Sequoia Head's forty-eighth head. Survive the Sequoia Head's forty-eighth attack. Find the Sequoia Head's forty-ninth head. Activate the Sequoia Head's forty-ninth head. Survive the Sequoia Head's forty-ninth attack. Find the Sequoia Head's fiftieth head. Activate the Sequoia Head's fiftieth head. Survive the Sequoia Head's fiftieth attack. DAILY DETAILS

Kyo Kusuke Scale: Kyo Petal
Height: 5'6" Weight: 120 lbs

Petal is wearing a white t-shirt underneath with green cargo pants and shoes that resemble Kyo's with the Kusuke red sash tied to Petal's waist. Petal, Spider Pose, Kyo Kusuke, 5'6 Middle Shot, Flat Object Pin Graphic

Petal is wearing the Kusuke sash around her waist. Kyo has the sash around his waist and his pants and shoes are the same as Petal's. Kyo Kusuke, 5'6 Middle Shot, Flat Object Pin Graphic

When Hayabusa Castle fell to ruins, souvenir forces attack the area for chaos, while Spider Team Tokyo keeps Kyo's past secret.

Kyo Master Sash: Kyo's Sash has been tied from the left to Master Kusuke Tree Uniform's front and tested. Self-wearing Kusuke Tree Uniform's front and tested.

Kyo's Master Sash is on the Spider Tree Shop's front and is made up with small Spider Weapons. Kyo wearing Kusuke Uniform's front and tested. Kyo Kusuke, 5'6 Middle Shot, Flat Object Pin Graphic

Kyo Kusuke Uniform
Kyo Kusuke Uniform

Helm Wolf Set

Armor
Helm Wolf Set

Helm Wolf Armor is a Heavy armor set found in Dark Souls.

Helm Wolf Armor

Helm Wolf Armor is found in the Undead Burg/Undead Parish. Take one of the Covenant of Artorias rings and head to the Undead Burg.

In the Undead Burg, head up the stairs and kill the Hollow Soldier and Hollow Archer. Continue up the stairs and kill the Hollow Soldier.

Proceed through the doorway and kill the Hollow Soldier and Hollow Archer on the other side.

Go up the stairs and kill the Hollow Soldier and Hollow Archer. Continue up the stairs and kill the Hollow Soldier.

Go up the stairs and kill the Hollow Soldier and Hollow Archer. Continue up the stairs and kill the Hollow Soldier.

Head

Mercenary Rotations: Arms

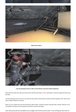
Author: Ashlyn
Contributors: Ashlyn, Ryan Kennedy

Patch: 7.0
Last Updated: 2019-08-19
Difficulty: Intermediate
Role: DPS
Type: Ranged
Resource: Heat
Armor: Medium
Weapon: Blaster Rifle

Arms is a ranged DPS spec that uses Blaster Rifles and Heat as a resource. Arms has a strong single target rotation and a decent AoE rotation. Arms has a lot of mobility and can maintain damage while moving.

Arms is a ranged DPS spec that uses Blaster Rifles and Heat as a resource. Arms has a strong single target rotation and a decent AoE rotation. Arms has a lot of mobility and can maintain damage while moving.

Abilities



Rapid Shots

Rapid Shots is a channeled ability that fires a burst of shots at the target. Rapid Shots is the primary single target ability for Arms. Rapid Shots has a base cooldown of 1.5 seconds and costs 12 heat. Rapid Shots can be used while moving.

Snipe

Snipe is a channeled ability that fires a single shot at the target. Snipe has a base cooldown of 1.5 seconds and costs 12 heat. Snipe can be used while moving.

Tracer Missile

Tracer Missile is a ranged ability that fires a missile at the target. Tracer Missile has a base cooldown of 12 seconds and costs 20 heat. Tracer Missile can be used while moving.

Flame Burst

Flame Burst is a ranged ability that fires a burst of flames at the target. Flame Burst has a base cooldown of 12 seconds and costs 20 heat. Flame Burst can be used while moving.

Thermal Detonator

Thermal Detonator is a ranged ability that throws a thermal detonator at the target. Thermal Detonator has a base cooldown of 12 seconds and costs 20 heat. Thermal Detonator can be used while moving.

Vanish

Vanish is a self-cast ability that makes you invisible for 10 seconds. Vanish has a base cooldown of 120 seconds and costs 0 heat. Vanish can be used while moving.

Jet Boost

Jet Boost is a self-cast ability that increases your movement speed by 50% for 10 seconds. Jet Boost has a base cooldown of 120 seconds and costs 0 heat. Jet Boost can be used while moving.

Rocket Punch

Rocket Punch is a melee ability that punches the target with a rocket-powered fist. Rocket Punch has a base cooldown of 12 seconds and costs 20 heat. Rocket Punch can be used while moving.

Shoulder Cannon

Shoulder Cannon is a ranged ability that fires a shoulder cannon at the target. Shoulder Cannon has a base cooldown of 12 seconds and costs 20 heat. Shoulder Cannon can be used while moving.

Concussion Missile

Concussion Missile is a ranged ability that fires a concussion missile at the target. Concussion Missile has a base cooldown of 12 seconds and costs 20 heat. Concussion Missile can be used while moving.

Plasma Screen

Plasma Screen is a self-cast ability that creates a plasma screen around you. Plasma Screen has a base cooldown of 120 seconds and costs 0 heat. Plasma Screen can be used while moving.

Hammer Shot

Hammer Shot is a ranged ability that fires a hammer shot at the target. Hammer Shot has a base cooldown of 12 seconds and costs 20 heat. Hammer Shot can be used while moving.

Full Auto

Full Auto is a channeled ability that fires a burst of shots at the target. Full Auto has a base cooldown of 12 seconds and costs 20 heat. Full Auto can be used while moving.

Power Shot

Power Shot is a ranged ability that fires a powerful shot at the target. Power Shot has a base cooldown of 12 seconds and costs 20 heat. Power Shot can be used while moving.

Rocket Boost

Rocket Boost is a self-cast ability that increases your movement speed by 50% for 10 seconds. Rocket Boost has a base cooldown of 120 seconds and costs 0 heat. Rocket

Welcome to the Wiki! This is a collaborative project to document everything about the Tekken series. Please read the Wiki Guidelines before making any edits.

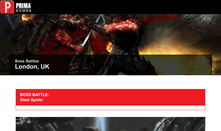
The Tekken Wiki is a collaborative project dedicated to the Tekken fighting game franchise. Our goal is to create the most comprehensive and accurate resource for players, fans, and anyone interested in the world of Tekken.

Whether you're looking for character move lists, frame data, tournament results, or lore explanations, you can find it here. We welcome contributions from everyone, from casual players to competitive professionals.

To get started, check out the Getting Started guide. If you're new to editing wikis, don't worry — we have templates and guidelines to help you. Feel free to ask questions on the Discussion page or in the Tekken Wiki Discord server.

Please remember to be respectful to other editors, cite your sources when adding competitive information, and keep edits neutral in tone. Let's build something great together!

Recent changes: Added Kazuya Mishima (Tekken 8) move list · Updated frame data for Jin Kazama · Fixed broken image links on Heihachi Mishima page · Added Tekken 8 tournament results · Corrected typo in Paul Phoenix combo section · Added new screenshots for Lars Alexandersson · Updated Devil Jin throw data · Added Tekken 8 patch notes



Boss Battle:
London, UK

BOSS BATTLE:
Steel Spider

Close Range Abilities: Electric Field, Flamethrower, Missiles
Long Range Abilities: Missiles
Strategy: The Steel Spider has no legs, but only the four rear legs are vulnerable. Each of the vulnerable legs has three layers of shielding to run through. When all of the shielding is gone, Hayabusa can wear the leg.

The front of the Steel Spider is a flamethrower. If Hayabusa stands still for too long, the Steel Spider uses an unblockable flame attack. Mounted on top of the Steel Spider is a machine gun and a rocket launcher. You don't have to worry much about the machine gun, but pay attention to the rocket launcher.

When it's on, it locks like a light, and missiles will soon be heading toward Hayabusa. This is also accompanied by a droning sound. When the rocket launcher illuminates and the droning sound is heard, slide to evade the missiles that will soon follow.

Slide from leg to leg between missile attacks. Use Quick Attacks on the legs until prompted to rapidly tap Quick Attack (+) to destroy each leg. When all of the Steel Spider's vulnerable legs are destroyed, the back panel opens.

Quickly move up the ramp and destroy the glowing orange section to finish off the Steel Spider. If Hayabusa does not destroy the back panel quickly, the Steel Spider generates an electrical field that cannot be blocked. If you have trouble reaching the back panel, wait for this to happen, then try again.

NORMAL DIFFICULTY

Hayabusa's attacks inflict significantly more damage, meaning that it requires fewer attacks to wear the legs of the Steel Spider.

In addition, the missiles the Steel Spider shoots at Hayabusa do not fire as frequently and inflict much less damage.

MASTER NINJA AND ULTIMATE NINJA DIFFICULTY

On Master Ninja and Ultimate Ninja, it becomes even more important to pay close attention to the rocket launcher on top of the Steel Spider. It fires more frequently and inflicts considerable damage to Hayabusa if he's hit.

As soon as you hear the chime and the rocket launcher illuminates, slide away. It may take longer to destroy each leg, but the risk of death is considerably lower if you slide to avoid the rockets.

Attacks each leg until only one layer of shielding remains. However, do not severe the leg yet. When a leg is severed, the Steel Spider uses an Electric Field to Hayabusa is close.

To avoid this, wait until all of the legs are down to a single layer of shielding, then sever one leg after another until all four are destroyed.

BOSS BATTLE:
Regent of the Mask

Close Range Abilities: Two-Hit Combo, Three-Hit Combos, Unblockable Two-Grab Combo

Long Range Abilities: Two-Hit Charge Technique

Strategy: Hold Block ( ) and wait for the Regent of the Mask to approach Hayabusa. Slide away from his first attack and wait to see which combo the Regent of the Mask uses. While inside, the Regent of the Mask primarily uses a two-hit combo.

Slide twice to avoid both attacks, but make sure the second slide leaves Hayabusa close enough to the Regent of the Mask to land a Quick Attack combo.

After attacking the Regent of the Mask, slide away to regroup. If Hayabusa uses too many attacks, the Regent of the Mask may counter with an unblockable three-combo or a parry if he for grows red. Put three combos is coming.

Use no more than three Quick Attacks at a time to avoid the Regent of the Mask's unblockable three combo.

Continue to use Hayabusa's sword clashes with the Regent of the Mask's and you're prompted to rapidly tap Quick Attack ( ). Repeat this process until the Regent of the Mask is knocked outside.

Try to stay on either side of the desk, or toward the back of the room, but do not step directly in front of the desk to make the transition happen faster.

The Regent of the Mask's Strong Attack combo.

Once outside, the Regent of the Mask starts to uses a three-hit Strong Attack combo in addition to his other attacks, and his unblockable three attack now consists of two throws and, occasionally, a third throw as well. Evade the first attack of the Strong Attack combo to make the second attack miss.

Wait until the last moment to slide away from the third attack. With proper timing, Hayabusa is close enough to connect with one Strong Attack or a few Quick Attacks.

It is highly recommended that you use only a single Strong Attack after evading the Regent of the Mask's combo attacks. However, you must exit quickly after evading the Regent of the Mask's attacks.

If you attempt additional attacks beyond a single Strong Attack, there's a chance the Regent of the Mask will use a series of unblockable throw attacks. It is extremely difficult to avoid these attacks if the Regent of the Mask initiates them while Hayabusa is attacking.

When the Regent of the Mask's fist glows red ...

... quickly slide away ...

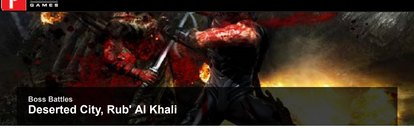
... or take big damage from the throw!

During the three-throw unblockable attack, all three attacks go through Hayabusa's attacks and cannot be defended against. If you see the red fist, slide away as quickly as possible.

The second throw has deceptively long range and reduces Hayabusa's health considerably, and the third throw is equally dangerous. It is very important to avoid this series of attacks at all costs.

The Regent of the Mask uses several other attack combos. It is possible to hit him after evading some of these combos, but it's somewhat risky.

If Hayabusa attacks too fast, the Regent of the Mask can block or counter with an attack. If he counters, it's very difficult for Hayabusa to evade.



BOSS BATTLE:
IDE-1011 Manta Helicopter

Close Range Abilities: Turret Gun

Long Range Abilities: Missiles

Strategy: Quickly slide to the left or right to dodge the helicopter as it dives toward Hayabusa. Use standing arrows to take out the rocket launchers on the wings of the helicopter. Shoot as many arrows as you can before a barrage of missiles flies toward Hayabusa.

Stay away from the middle of the platform and slide to avoid the helicopter when it dives at Ryu. Do not shoot the cockpit because it cannot be damaged by arrows.

Take out the first helicopter, then press Jump ([A] or [X]) when prompted to dive off the roof. Follow the on-screen prompts and press Strong Attack ([Y] or [△]), then rapidly tap Strong Attack (or [△]).

Slide toward the turret and stay away from the guns. When it turns toward Hayabusa, slide to the other side. Repeat this process until the front of the turret glows yellow. Use Strong Attacks, then press Quick Attack ([X] or [□]) when prompted to destroy it.

Continue to follow the prompts by pressing Jump ([A] or [X]).

Shoot the rocket launchers on the wings of the helicopter.

Slide to avoid the helicopter when it dives at Hayabusa.

When you land on the next platform, another helicopter appears. Follow the same strategy as before, aiming at the rocket launchers on either side of the helicopter and staying away from the center of the platform.

Kunai Climb toward the turret ...

... and move left or right to avoid gun fire.

Destroy the helicopter and press Jump ([A] or [X]) when prompted. In the air, press Left or Right on the Left Analog Stick and hold Block ([L1] or [L1]) when prompted, then press Strong Attack ([Y] or [△]) and rapidly tap Strong Attack ([Y] or [△]).

Repeat the strategy to take out the next turret, then use the Kunai Climb when the wing shifts vertically. Use the Left Analog Stick to avoid the turret fire, but be careful not to fall or Hayabusa dies.

When the wing returns to the normal alignment, ignore the Heavy Soldiers (Jetpack) and focus on destroying the turret. Follow the prompts to jump to the next platform, then take out the Heavy Soldiers (Jetpack) with jumping arrow shots.

BOSS BATTLE: Ogerbeetaurus

Close Range Abilities: Stomp Attack

Long Range Abilities: Charge Attack, Tail Whip, Sonic Roar, Bite

Strategy: When the battle begins, move to the opposite side of the room and wait for the Ogerbeetaurus to run toward Hayabusa.

When this happens, slide to either side to avoid the Charge Attack, then quickly slide toward the opposite end of the room.

The Ogerbeetaurus almost always uses two Charges, then falls to the ground and emits up close to where it started.

Attack the Ogerbeetaurus with two Quick Attacks combos (, ,) and take aim in the direction of the Ogerbeetaurus's tail.

When the Ogerbeetaurus begins to rise, it usually uses a Tail Whip attack. However, if Hayabusa runs in the direction of the tail while the Ogerbeetaurus is grounded, the Tail Whip almost always misses.

When the Ogerbeetaurus turns chrome...

... attack it's head

Repeat this process until the Ogerbeetaurus's legs turn chrome. When this happens, wait for the Ogerbeetaurus to Charge again twice and, when it falls, attack its head.

This is the only vulnerable spot on the Ogerbeetaurus's body. Be careful to avoid the Tail Whip when the Ogerbeetaurus gets up. Repeat this process until a short cinematic occurs, followed by a chase scene.

If Hayabusa is close to the Ogerbeetaurus when it's not on the ground, step away from its head. It has a Bite attack that covers most the space directly in front of it and is one of its most damaging attacks.

It also uses a Sonic Roar that is difficult to evade and covers a moderate distance.

When close to the Ogerbeetaurus, move under it as quickly as possible. Focus on its legs with one or two Quick Attacks.

As soon as you see one of the legs lift off the ground, slide to the opposite leg and continue attacking with another one or two Quick Attacks.

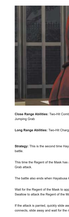
If you use more than two Quick Attacks, you risk getting caught by the Ogerbeetaurus's leg and taking damage.

If the Ogerbeetaurus raises his leg high into the air, make sure Hayabusa is close to the other leg or else far enough away from the raised leg to avoid the Stomp Attack and resulting shock wave that follows.

Repeat this process until the Ogerbeetaurus starts charging again, then go back to the original strategy.

Run toward the camera and, when you see bone fragments on the ground, be prepared to jump over the large bone just ahead.

This happens twice, and it's followed by a missile that Hayabusa must slide under. After sliding under the missile, shoot an arrow to blow it up when prompted.



Continue through the cavern, climb the end of the hallway to engage the Ogerbeetaurus once again. Slide to the right, then press Strong Attack ( ) when prompted. Do not drift to the left or right side of the room.

Instead, stay on the opposite side of the Ogerbeetaurus and around the center of the room so that you have plenty of room to slide to either side when the Ogerbeetaurus Charges.

Avoid the Ogerbeetaurus's Charges and attack its head when it falls to the ground.

When the game begins to move in slow motion, press Strong Attack ( ) and follow the on-screen prompts to press Strong Attack ( ) quickly to take down the Ogerbeetaurus and initiate another cinematic.

NORMAL DIFFICULTY

Even on easier difficulty settings, the battle doesn't change all that much. At the beginning of the battle, it's not necessary to waste time waiting for the Ogerbeetaurus to Charge and fall.

Instead, attack its legs until it falls to make the battle move along quickly. Even if Hayabusa takes some damage here, it won't be significant.

It's still important to avoid the Stomp Attack and Bite but any other attacks are not an immediate threat.

MASTER NINJA AND ULTIMATE NINJA DIFFICULTY

Do not engage the Ogerbeetaurus at close range unless it is on the ground after a Charge Attack. Almost any attack from the boss inflicts incredible damage to Hayabusa.

Depending on how much health Hayabusa starts the battle with, a single attack could nearly finish him off, especially if it's the Bite or he gets hit by the Charge Attack.

BOSS BATTLE: Regent of the Mask

Close Range Abilities: Two-Hit Combo, Three-Hit Combo, Five-Hit Combo, Unblockable Two-Grab Combo, Unblockable Jumping Grab

Long Range Abilities: Two-Hit Charge Technique

The Regent of the Mask's two combos.

Strategy: This is the second time Hayabusa battles against the Regent of the Mask, and the fight closely resembles the initial battle.

This time the Regent of the Mask has a couple new techniques in the way of a five-hit combo and an Unblockable Jumping Grab attack.

The battle also ends when Hayabusa knocks the Regent of the Mask outside. There's no continuation like the first battle.

Wait for the Regent of the Mask to approach Hayabusa. Slide away from his first attack, then use the Wind Run into Flying Swallow to attack the Regent of the Mask.

If the attack is parried, quickly slide away to avoid the Regent of the Mask's counterattack. If the attack is blocked or connects, slide away and wait for the next attack to repeat the process.

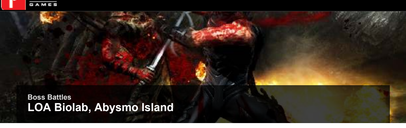
If the Regent of the Mask uses a five-hit combo (which consists of several vertical spinning attacks at the end), try to use the Wind Run into Flying Swallow before the vertical spinning attacks, or after the attack in the combo (a thrusting attack).

The vertical spinning attacks can knock Hayabusa out of the Flying Swallow.

After attacking, slide away from the Regent of the Mask. If you attack too much, the Regent of the Mask may counter using his Unblockable Grab Combo. If his fist grows red, watch out for the throw combo.

Limit your attacks to no more than three Quick Attacks to avoid this. The only exception is after a sword clash. When this happens, rapidly tap Quick Attack ( ) as prompted, then follow with five to five Quick Attacks.

Five Quick Attacks is almost always safe, but five can sometimes hit. Pay close attention to the Regent of the Mask during the fifth attack. If his fist grows red, slide away immediately to avoid the throw combo.

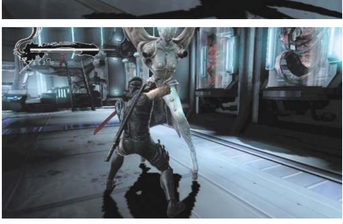


Boss Battles
LOA Biolab, Abysmo Island

BOSS BATTLE:
Prototype Goddess "Lovelace"

Close Range Abilities: Four-Hit Claw Combos, Three-Hit Kick Combos, Unblockable Grabs

Long Range Abilities: Projectile, Flying Kick, Acid Spray (with tentacle arms), Quick Swipe (with tentacle arms), Charge (with Demon arms), Jumping Smash (with Demon Arms), Two-Hit Lunge Attack Combo (with Demon arms)



Strategy: The Prototype's arms morph into three different forms, but all of them can be attacked in the same manner. In addition, all three have Unblockable Grabs when her hands glow red.

She starts with normal arms. Stay as close to her as possible when she's in this form.

If Hayabusa backs away from her when she has normal arms, she unleashes a barrage of projectile attacks that are hard to evade and inflict considerable damage.

Use Quick Attack combos until she evades or blocks. If she evades Hayabusa's attack, prepare to block the attack that follows.

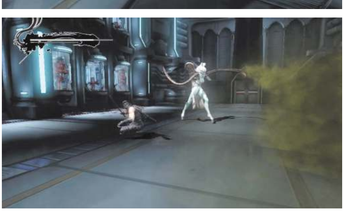
If she blocks, wait for her to use a combo attack (four-hit claw combo or three-hit kick combo). Use multiple slides to evade the combo, then use a Quick Attack combo to counterattack.

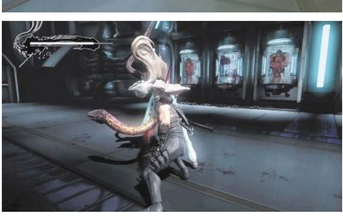
Occasionally she uses a kick combo that ends with three spinning kicks. Treat this the same way as you would her other combos and counterattack after the last kick.

When her hands glow red, slide away as quickly as possible to avoid her Unblockable Grab attack. If she bends down, another Unblockable Grab is coming. This one is harder to see, so you must pay attention.

Continue to use Quick Attack combos until prompted to rapidly tap Strong Attack ([▽] or [△]) to slice off the Prototype's arms.

For a short time, the Prototype cannot use her Claw Combos. Keep attacking until she grows tentacle arms (similar to the arms of a Snake-Mutant).



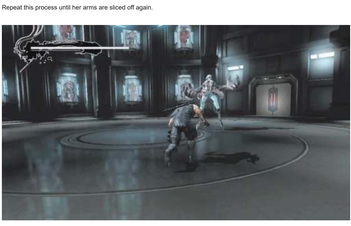


When the Prototype has tentacle arms, stay outside of her attack range, but close enough to reach her with one slide.

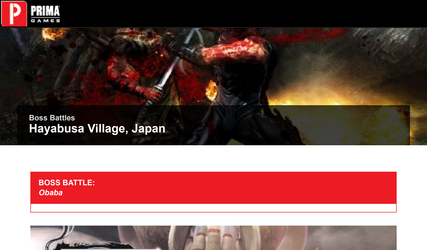
Keep in mind, immediately following a slide, Hayabusa's Quick Attack has considerable range, so you can remain a decent distance away from the Prototype.

Wait for her to use the Acid Spray, then quickly slide to the right and toward the Prototype and use Quick Attack combos to interrupt the Acid Spray before it reaches Hayabusa.

Repeat this process until her arms are sliced off again.

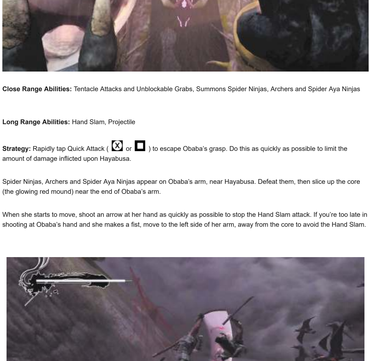


When the Prototype taunts...



Hayabusa Village, Japan

BOSS BATTLE: *Obaba*



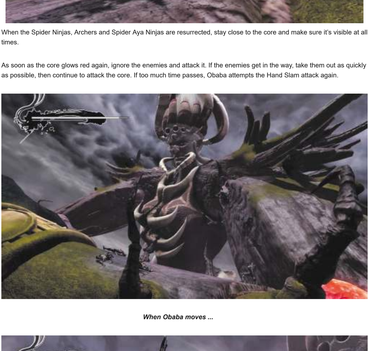
Close Range Abilities: Tentacle Attacks and Unblockable Grabs, Summons Spider Ninjas, Archers and Spider Aya Ninjas

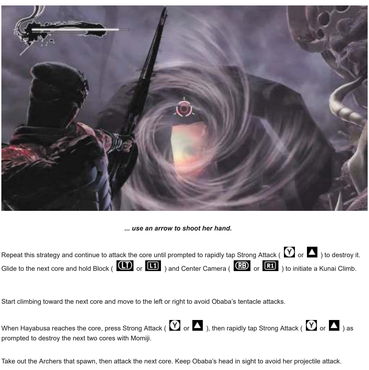
Long Range Abilities: Hand Slam, Projectile

Strategy: Rapidly tap Quick Attack (X or ■) to escape Obaba's grasp. Do this as quickly as possible to limit the amount of damage inflicted upon Hayabusa.

Spider Ninjas, Archers and Spider Aya Ninjas appear on Obaba's arm, near Hayabusa. Defeat them, then slice up the core (the glowing red mound) near the end of Obaba's arm.

When she starts to move, shoot an arrow at her hand as quickly as possible to stop the Hand Slam attack. If you're too late in shooting at Obaba's hand and she makes a fist, move to the left side of her arm, away from the core to avoid the Hand Slam.

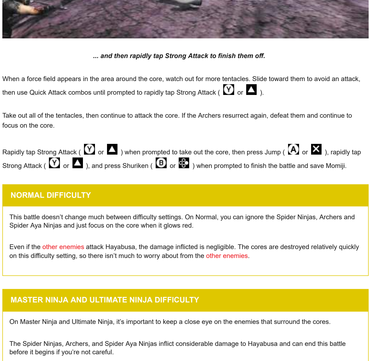




When the Spider Ninjas, Archers and Spider Aya Ninjas are resurrected, stay close to the core and make sure it's visible at all times.

As soon as the core glows red again, ignore the enemies and attack it. If the enemies get in the way, take them out as quickly as possible, then continue to attack the core. If too much time passes, Obaba attempts the Hand Slam attack again.

When Obaba moves ...



... use an arrow to shoot her hand.

Repeat this strategy and continue to attack the core until prompted to rapidly tap Strong Attack (Y or ▲) to destroy it. Glide to the next core and hold Block (L1 or L2) and Center Camera (R3 or L1) to initiate a Kunai Climb.

Start climbing toward the next core and move to the left or right to avoid Obaba's tentacle attacks.

When Hayabusa reaches the core, press Strong Attack (Y or ▲), then rapidly tap Strong Attack (Y or ▲) as prompted to destroy the next two cores with Momiji.

Take out the Archers that spawn, then attack the next core. Keep Obaba's head in sight to avoid her projectile attack.

When you see it coming, slide out the way (it is also possible to attack the projectile, but the timing can be tricky), then continue attacking the core.

If the Archers are resurrected, keep the core in sight and attack the enemies until the core glows red again, and then go back to attacking the core.

Slide toward the tentacles ...

... and then rapidly tap Strong Attack to finish them off.

When a force field appears in the area around the core, watch out for more tentacles. Slide toward them to avoid an attack, then use Quick Attack combos until prompted to rapidly tap Strong Attack (Y or ▲).

Take out all of the tentacles, then continue to attack the core. If the Archers resurrect again, defeat them and continue to focus on the core.

Rapidly tap Strong Attack (Y or ▲) when prompted to take out the core, then press Jump (A or ✕), rapidly tap Strong Attack (Y or ▲), and press Shuriken (O or ●) when prompted to finish the battle and save Momiji.

NORMAL DIFFICULTY

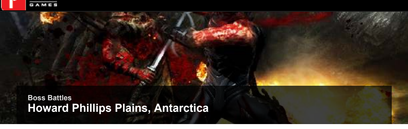
This battle doesn't change much between difficulty settings. On Normal, you can ignore the Spider Ninjas, Archers and Spider Aya Ninjas and just focus on the core when it glows red.

Even if the other enemies attack Hayabusa, the damage inflicted is negligible. The cores are destroyed relatively quickly on this difficulty setting, so there isn't much to worry about from the other enemies.

MASTER NINJA AND ULTIMATE NINJA DIFFICULTY

On Master Ninja and Ultimate Ninja, it's important to keep a close eye on the enemies that surround the cores.

The Spider Ninjas, Archers, and Spider Aya Ninjas inflict considerable damage to Hayabusa and can end this battle before it begins if you're not careful.



Boss Battles

Howard Phillips Plains, Antarctica

Boss Battle
Epigonos

Close Range Abilities: A variety of combo attacks

Long Range Abilities: None

Strategy: Epigonos has a wide variety of attack combos, somewhat similar to Hayabusa's attacks. However, the first battle against him is relatively easy.

Wait for Epigonos to get close and block his first combo (usually three or five hits). Slide to evade the third attack, then counterattack immediately with an Izuna Drop.

It is also possible to use a continuous series of Strong Attack combos instead of the Izuna Drop. If the twin uses Wind Run into Flying Swallow repeatedly, block the attack, then counter with a barrage of Strong Attacks.

When the twin kneels down, walk toward him and press any attack button, then rapidly tap Strong Attack (△ or ▲) when prompted. After a brief cinematic, continue the battle with Epigonos in final form.

CAUTION

There is an invisible wall blocking the staircases on either side of the room. Be careful not to get cornered in these areas.

MASTER NINJA AND ULTIMATE NINJA DIFFICULTY

It is imperative that Hayabusa does not get hit by Epigonos on the Master Ninja and Ultimate Ninja difficulties. One Izuna Drop from the twin can kill Hayabusa under the right circumstances.

While this version of the twin is not as aggressive as the final form variant, he can still dish out significant amounts of damage. Stay cautious and only attack after evading one of his combos.

NORMAL DIFFICULTY

On Normal difficulty, Hayabusa can rush down Epigonos with Quick and Strong Attack combos. If the twin blocks these attacks, switch back to the Hard difficulty strategy and wait for an opening to attack, then go back to an aggressive barrage of combos.

Boss Battle
Epigonos (Final form)

Close Range Abilities: Shadow Dodge, Dragon Sword Combos, Dragon's Claw Combos, Eclipse Scythe Combos, Scythe Toss (with Eclipse Scythe equipped)

Long Range Abilities: Slide, Dark Void Ninpo, Flying Swallow (with Dragon Sword equipped), Unblockable Grab (with Eclipse Scythe equipped), Charge Wave (with Eclipse Scythe equipped)

Strategy: The final form of Epigonos is more aggressive than the previous variation, and has several of the weapons Hayabusa used in *Ninja Gaiden Sigma 2* .

He starts with the Eclipse Scythe and changes to the Dragon Sword and Dragon's Claw throughout the battle.He has the same combos Hayabusa had with these weapons.

Be careful when he uses the Scythe because it has deceptive range, an Unblockable Grab attack and the ability to hit Hayabusa from a good distance with the Charge Wave attack (when the twin charges up an attack, then unleashes a near-invisible projectile wave).

Epigonos also uses the unblockable slide when the Dragon's Claw is equipped. However, the slide does not inflict much damage. Stay away from Epigonos until he changes to the Dragon Sword or Dragon's Claw.

If he has the Eclipse Scythe equipped and enters a charging stance that resembles Hayabusa's Ultimate Technique, stay as far away from him as possible to avoid the incoming Charge Wave attack.

Remain blocking while Epigonos uses a combo. Most combos have a Strong Attack that breaks Hayabusa's guard and leaves him open to attack.

Slide to avoid this attack, which is the third and fifth attacks with the Dragon Sword, the third attack with the Dragon's Claw, and the second attack with the Eclipse Scythe.

When the combo concludes (usually three or five attacks), follow the same strategy as before and use the Izuna Drop or a continuous barrage of Strong Attack combos.

When Hayabusa builds up to an Ultimate Technique, rapidly press Strong Attack (△ or ▲) as prompted, then back away and use the Ultimate Technique as quickly as possible.

When Epigonos charges up his Ninpo ...

... stay close and slide to either side or behind him to avoid it.

The Black Marshal, Pacific Ocean

Mission Briefing

Starring Striker: Gipsy Danger (Default Version)

Cast Drop Striker: Tacoda

Strategy: The Black Marshal is a tough mission with a large number of enemies. Despite some weapons and their attacks.

The special threat is one of the Mega Kaiju, Leatherback. This is the Alpha Kaiju and one of the only Kaiju Mega Kaiju that can fly. Leatherback is also the only Kaiju that can attack from the air.

Most Kaiju are Medium Kaiju, which are the most common Kaiju. They are also the most varied in their attacks.

The Small Kaiju are the Jaegers' favorite Kaiju. They are Kaiju that are fast and weak. Small Kaiju are Kaiju that are fast and weak.

Mission Objectives

Mission Objective 1: Destroy the Kaiju Leatherback

Destroy the Kaiju Leatherback. Leatherback is the Alpha Kaiju and the only Kaiju that can fly. Leatherback is also the only Kaiju that can attack from the air.

AVAN BATTLE GUIDE

Close Range Abilities: Energy Explosion, Two-Hit Combo, Five-Hit Combo, Unblockable Dual

Long Range Abilities: Projectile, Laser, Precocious Points Harpoon

Strategy: Avan can do focus wide-ranging, slow attack or rapid-a-zoom-ZIP projectile attack. Stand out outside of ZIP's recommended close range and wait for him to initiate a combo.

He generally uses close- to five-hit combo. Counterattack with a series of Quick Attacks at the conclusion of each combo. If you see ZIP's arms glow white, quickly strike away to avoid the Unblockable Dual.

Once you have suffered enough damage, you're prompted to buy Energy Armor. ZIP's ability is less of ZIP's record rate of arms. If you have enough, back away and wait for ZIP's projectile attack.

Watch a large laser attack signified by the glowing of his arms and ZIP. Take caution of his arms and wait for ZIP to expulse. When he does, quickly strike forward to hit him with an Uninterrupt of Quick Attacks until he recovers.

When the battle begins

— side left or right to avoid ZIP's projectile attack

Repeat the process with ZIP-charges into a flying slash. As soon as he's airborne, aims to charge any projectile attacks. Not a chance at a stand-off. Then engage in just combination and Projectile Attack for free of the Unblockable Dual to stop ground fire.

When ZIP grows white —

— get away or Impulsive will be caught in an Unblockable Dual!

ZIP summons a horde of Pyromaniac Points with fiery blasts and using a Projectile Attack against Impulsive. Stay clear of the bright patches on the ground as they indicate the trajectory of the laser.

Use Voice Dive to avoid the Pyromaniac Points and Fire Blasts or to be immune to most of ZIP's attacks. All roughly like Pyromaniac Points in battle as an Ultimate Technique, then ordered on the remaining Pyromaniac Points are ZIP.

When ZIP runs the ground, attack with a charging Fire Blast. Then you can refire and begin damage before ZIP puts back into the air. Just be prevented to prevent any Energy Armor. Use Voice Dive to avoid the Fire Blasts. If you cannot, Voice Pyromaniac Points will still be used to avoid most ground attacks.

NORMAL DIFFICULTY

The rules of the game, there really isn't a significant difference when playing on the Normal difficulty compared to Hard. The only change worth noting is that the Pyromaniac Points do not fill up as fast, but you'll still see them aggressively.

The Energy Explosion attack won't hit Impulsive unless he's too on health, so you have a little leeway there, but otherwise play the same as Hard.

MASTER SKILL AND ULTIMATE WHILE DIFFICULTY

Follow the hard strategy, but be extra cautious of ZIP's Energy Explosion. It has a large blast radius and can still damage you even if you're under Master Rage or Ultimate Rage active.

The Pyromaniac Points are also more aggressive on the higher the difficulty settings. Stick to Voice Dive to finish them off and be careful to avoid their ground attacks.

Avan Battle
Prepared For Most Previous

Close Range Abilities: Two-Hit Combo, Three-Hit Combo, Unblockable Two-Dual Combo

Long Range Abilities: Two-Hit Charge Technique

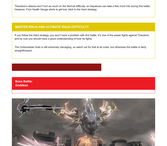
Strategy: Due to Impulsive's fourth-line fighting against the Regent of the Water and arguably the weakest of the fights.

Use Voice Dive, Voice Dive, and Voice Dive to maximize speed and evasion. When he goes back, use the time to punish his weak.

Fire Lasts the Sword to Flying Deadline or while, allow you evade the first attack, the second will miss. Wait until until the last moment to evade the first attack with a slide.

The Severe Duplicate Attack enough to connect with a one- or two-hit Strong Attack combo or use a Wind Run into a Flying Feather.

It is best to use either the Flying Deadline or a single Strong Attack hard, but if you're feeling risky and want to end the battle faster, try one-hit combo.



Thunderic's Avan-Kit Strong Attack combo

Immediately following Impulsive's attack, while away from Thunderic. If you only used a single Strong Attack, he won't have much of a counterattack.

However, if you were lazy and tried to go for two, he may counter with an Unblockable Two-Dual Combo. If he first glows, use the attack to evening.

If Thunderic knows his stance ...

... prepare to evade his Ultimate Technique.

If Thunderic tested the stance and pressed his control next to the ground, be ready to evade with a slide. This is his version of a Master Rage.

When Thunderic is under less than one-millionth to engage if you're not careful. Watch a get away from the first attack, then immediately strike again. Thunderic follows his initial attack with a second almost immediately after.

NORMAL DIFFICULTY

The rules of the game, fight against Thunderic and evade the strategy to defeat him doesn't very much on the Normal difficulty setting. Impulsive's fourth-line fighting against Thunderic and arguably the weakest of the fights.

Use a barrage of Quick Attacks enemies until Thunderic begins to fight back. Shift into the hard strategy and evade his counters, then go right back to hitting aggressive.

Thunderic's attacks don't hurt as much on the Normal difficulty, so Impulsive can take a few more hits during the battle. However, if he does get down, you'll still be in the hard strategy.

MASTER SKILL AND ULTIMATE WHILE DIFFICULTY

Follow the hard strategy, but don't become a problem with the battle. It's one of the easier fights against Thunderic, and he may run should meet a good understanding of how to fight.

The Unblockable Dual is still extremely damaging, so watch out for that at all costs, but otherwise this battle is fairly straightforward.

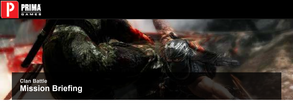
Avan Battle
Outdated

Close Range Abilities: None

Long Range Abilities: Projectile, Hot Stars, Sword Stand

Strategy: After Hayabusa defeats Thessina for the last time, a TBP similar to the one at the beginning of the game takes place.

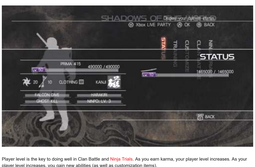
When prompted, Shift Backward ( ), Left Strong Attack ( ), Left Strong Attack ( ), Shift Backward ( ), Left Strong Attack ( ), Left Strong Attack ( ), Left Strong Attack



Clan Battle

Mission Briefing

Player Level



Player level is the key to doing well in Clan Battle and Ninja Trials. As you earn karma, your player level increases. As your player level increases, you gain new abilities (as well as customization items).

It is highly recommended to avoid Clan Battle until you've reached player level 4, at the very least. This gives you the Ghost Kill ability, which is extremely helpful in Clan Battle. Ninpo, which is earned at Player Level 7, is also very useful.

Player Levels

Level	Karma Required	Skill Earned
1	0	None
2	5,000	None
3	10,000	None
4	15,000	Ghost Kill
5	20,000	None
6	25,000	None
7	30,000	Ninpo Level 1
8	35,000	None
9	40,000	None
10	45,000	None
11	100,000	Falcon Dive
12	110,000	None
13	120,000	None
14	130,000	None
15	140,000	None
16	150,000	Ninpo Level 2
17	160,000	None
18	170,000	None
19	180,000	None
20	190,000	None
21	200,000	Ninpo Level 3
22	210,000	None
23	220,000	None
24	230,000	None

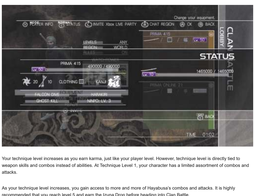
43	420,000	None
44	430,000	None
45	440,000	None
46	450,000	None
47	460,000	None
48	470,000	None
49	480,000	None
50	490,000	None

Technique Level



Your technique level increases as you earn karma, just like your player level. However, technique level is directly tied to weapon skills and combos instead of abilities. At Technique Level 1, your character has a limited assortment of combos and attacks.

As your technique level increases, you gain access to more and more of Hayabusa's combos and attacks. It is highly recommended that you reach level 5 and earn the Izuna Drop before heading into Clan Battle.

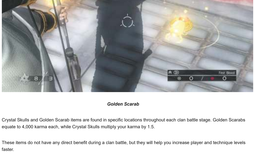
However, once you have unlocked the Technique Level 2 skill set (earned at level 3), it is possible to inflict a significant amount of damage even without the Izuna Drop.

Technique Levels

Level	Karma Required	Skill Earned
1	0	Technique Level 1
2	20,000	Flying Swallow
3	40,000	Technique Level 2
4	60,000	Ultimate Technique Level 1
5	80,000	Izuna Drop
6	160,000	Technique Level 3
7	325,000	Ultimate Technique Level 2
8	800,000	Technique Level 4
9	1,050,000	Ultimate Technique Level 3
10	1,400,000	Dragon Sword

Crystal Skulls and Golden Scarabs

Crystal Skull



Golden Scarab

Crystal Skulls and Golden Scarab items are found in specific locations throughout each clan battle stage. Golden Scarabs equate to 4,000 karma each, while Crystal Skulls multiply your karma by 1.5.

These items do not have any direct benefit during a clan battle, but they will help you increase player and technique levels faster.

If you're still trying to level up, study the maps to find the locations of these items, and head straight for them as soon as a clan battle starts.

Contracts

To earn additional karma in Clan Battle and Ninja Trials mode, contracts are issued to your ninja character, which appear in the bottom right corner of the screen.

Specific conditions must be met in order to fulfill a contract. For example, you may need to kill two enemies without dying to complete a contract.

Like Crystal Skulls and Golden Scarabs, contracts do not have a direct impact on the clan battle and there is no penalty if you fail to complete a contract.

Harakiri

Once you reach player level 26, when you're in an injured state you can commit suicide. This prevents a rival player from earning a kill and aids your clan. Press ◻ + ○ while in an injured stated to perform harakiri and take your own life.

Injured State

When your ninja has very low health, he loses the ability to perform most of his attacks, combos, and skills. This state is very similar to Hayabusa's state when his cursed arm is in pain during the story mode.

You lose the ability to run and have access to only a single attack that has limited range and inflicts only a small amount of damage. You also gain the ability to use Harakiri (if you have unlocked the ability) and take your own life.

Chapter 4

Clan Battle Strategies and Abilities

Shuriken

Shuriken are extremely important during clan battles. While a shuriken does not inflict much damage, it stuns an opponent, leaving him open to an attack.

In addition, as long as you're facing an opponent and there are no obstacles in the way, a shuriken automatically targets an opponent. The occurs even if the opponent is camouflaged or an attempt to get a Ghost Kill.

The number of shuriken you can hold depends on your player level. The higher your player level, the more shuriken you can carry. When you die during a clan battle, your shuriken are completely replenished.

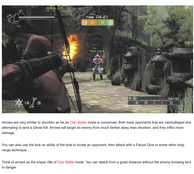
However, there's no other way to replenish shuriken, so use them sparingly. If you're close to death, make a last-ditch effort to survive by using the rest of your shuriken.

If you survive, you may be one step closer to victory, and if you die, your shuriken are fully replenished anyway.

Shuriken Capacity

Total Capacity	How to Unlock
4	Obtain Player Level 1.
6	Obtain Player Level 4.
12	Obtain Player Level 13.
16	Obtain Player Level 18.
20	Obtain Player Level 23.

Arrows



Arrows are very similar to shuriken as far as Clan Battle mode is concerned. Both track opponents that are camouflaged and attempting to land a Ghost Kill. Arrows will target an enemy from much farther away than shuriken, and they inflict more damage.

You can also use the lock-on ability of the bow to target an opponent, then attack with a Falcon Dive or some other long-range technique.

Think of arrows as the sniper rifle of Clan Battle mode. You can attack from a great distance without the enemy knowing he's in danger.

The total number of arrows you can carry is determined by your player level. As your player level increases, the number of arrows you can carry also increases.

The only way to replenish arrows during a clan battle is to die, so if you're close to death, make sure you use any remaining arrows you have in an effort to stay alive.

The worst possible outcome is that you die and then you'll have a fresh supply of arrows.

Arrow Capacity

Total Capacity	How to Unlock
2	Obtain Player Level 1.
4	Obtain Player Level 8.
6	Obtain Player Level 12.
8	Obtain Player Level 17.
10	Obtain Player Level 22.

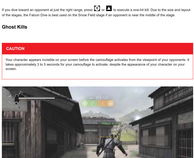
Slide

The slide is an extremely powerful offensive and defensive tool in Clan Battle mode. On offense, it breaks an opponent's guard and allows you to follow-up with an immediate combo.

Defensively, the slide is your best evasion tool, allowing you to dodge shuriken, arrows, and even Ultimate Techniques with proper timing.

If an enemy is nearby and attacks, use consecutive slides to evade the attacks and potentially stun him so that you can turn the tide of battle in your favor.

Falcon Dive



Unfortunately, the Falcon Dive has limited uses in Clan Battle mode. It can kill an opponent in a single attack, but initiating and successfully attacking with a Falcon Dive is not an easy task.

To initiate a Falcon Dive, you must start on a platform high above the ground, then jump and hold to start the Falcon Dive. Once initiated, use the Left Analog Stick to move your ninja to the right or left.

You do not have much control, which makes it difficult to properly target an opponent. In addition, the Falcon Dive has a very long range and isn't useful if you're trying to attack an enemy that is moderately close to you.

If you dive toward an opponent at just the right range, press to execute a one-hit kill. Due to the size and layout of the stages, the Falcon Dive is best used on the Snow Field stage if an opponent is near the middle of the stage.

Ghost Kills

CAUTION

Your character appears invisible on your screen before the camouflage activates from the viewpoint of your opponents. It takes approximately 3 to 5 seconds for your camouflage to activate, despite the appearance of your character on your screen.

Walk to activate the camouflage.

Once you earn the Ghost Kill skill, walk for a short time and your ninja activates a camouflage that makes him very difficult to see. In addition, the name above your head disappears. As long as you don't stop walking, your ninja remains camouflaged.

During this time, as you move, opponents will see a slight distortion to indicate where you are. However, the farther away you are from an opponent, the harder it is for him to see the distortion.

Unfortunately, while camouflaged, shuriken and arrows will still target your ninja, and you can be hit by any attack, whether the opponent knows you're nearby or not.

If you see an enemy close by, approach from behind or jump from above between you and the enemy until he engages another ninja. At this point, move toward him and press to execute a Ghost Kill.

This stabs him through the chest and kills any opponent in a single attack. When you execute a Ghost Kill, your ninja becomes visible and vulnerable to an attack for a short time. Make sure you do not miss when attempting a Ghost Kill.

Ultimate Technique

An Ultimate Technique in Clan Battle mode is similar to an Ultimate Technique as Hayabusa, but not quite the same. If you kill two consecutive opponents without dying, your sword glows red.

This indicates that you can use an Ultimate Technique. Hold and , then release to execute an Ultimate Technique.

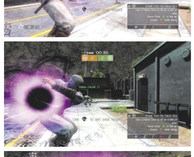
Under most circumstances, an Ultimate Technique targets the closest enemy and kills him in a single attack.

However, an opponent can use a properly timed slide or jump to evade your Ultimate Technique. Luckily, you're not vulnerable to a counterattack for very long, but a skilled opponent can still take advantage of the situation and attack you.

If you're not close to any enemies when you execute an Ultimate Technique, it will be wasted and your ninja will not attack any opponents.

It's best to use an Ultimate Technique in a crowded area so that it's difficult for the opposing clan to know which ninja is being targeted. It's also much harder to evade an Ultimate Technique while engaged in battle with another ninja.

Ninpo



The Dark Void Ninpo is the only Ninpo available in Clan Battle mode. As you inflict damage, your Ki Gauge builds up, just like in the main game. Once the Ki Gauge is full, you can use Ninpo.

Under most circumstances, it can kill an opponent with a single shot. It can also go through any and all obstacles, and can be aimed in almost any direction. This makes the Dark Void Ninpo extremely deceptive and useful from a distance.
